(54) Title: N-CYCLOPENTYL MODULATORS OF CHEMOKINE RECEPTOR ACTIVITY

(I)

(57) Abstract: The present invention is directed to compounds of the formula (I): (wherein R<sup>1</sup>, R<sup>3</sup>, R<sup>4</sup>, R<sup>5</sup>, R<sup>6</sup>, R<sup>7</sup>, R<sup>8</sup>, X, n, x and y are defined herein) which are useful as modulators of chemokine receptor activity. In particular, these compounds are useful as modulators of the chemokine receptors CCR-5 and/or CCR-3.

## TITLE OF THE INVENTION

## N-CYCLOPENTYL MODULATORS OF CHEMOKINE RECEPTOR ACTIVITY

## BACKGROUND OF THE INVENTION

5 Chemokines are chemotactic cytokines that are released by a wide variety of cells to attract macrophages, T cells, eosinophils, basophils and neutrophils to sites of inflammation (reviewed in Schall, Cytokine, 3, 165-183 (1991) and Murphy, Rev. Immun., 12, 593-633 (1994)). There are two classes of chemokines, C-X-C ( $\alpha$ ) and C-C ( $\beta$ ), depending on whether the first two cysteines are separated by a  
10 single amino acid (C-X-C) or are adjacent (C-C). The  $\alpha$ -chemokines, such as interleukin-8 (IL-8), neutrophil-activating protein-2 (NAP-2) and melanoma growth stimulatory activity protein (MGSA) are chemotactic primarily for neutrophils, whereas  $\beta$ -chemokines, such as RANTES, MIP-1 $\alpha$ , MIP-1 $\beta$ , monocyte chemotactic protein-1 (MCP-1), MCP-2, MCP-3 and eotaxin are chemotactic for macrophages, T-  
15 cells, eosinophils and basophils (Deng, et al., Nature, 381, 661-666 (1996)).

The chemokines bind specific cell-surface receptors belonging to the family of G-protein-coupled seven-transmembrane-domain proteins (reviewed in Horuk, Trends Pharm. Sci., 15, 159-165 (1994)) which are termed "chemokine receptors." On binding their cognate ligands, chemokine receptors transduce an  
20 intracellular signal through the associated trimeric G protein, resulting in a rapid increase in intracellular calcium concentration. There are at least sixteen human chemokine receptors that bind or respond to  $\beta$ -chemokines with the following characteristic pattern: CCR-1 (or "CKR-1" or "CC-CKR-1") [MIP-1 $\alpha$ , MIP-1 $\beta$ , MCP-3, RANTES] (Ben-Barruch, et al., J. Biol. Chem., 270, 22123-22128 (1995); Beate, et al, Cell, 72, 415-425 (1993)); CCR-2A and CCR-2B (or "CKR-2A"/"CKR-  
25 2A" or "CC-CKR-2A"/"CC-CKR-2A") [MCP-1, MCP-3, MCP-4]; CCR-3 (or "CKR-3" or "CC-CKR-3") [eotaxin, RANTES, MCP-3] (Combadiere, et al., J. Biol. Chem., 270, 16491-16494 (1995); CCR-4 (or "CKR-4" or "CC-CKR-4") [MIP-1 $\alpha$ , RANTES, MCP-1] (Power, et al., J. Biol. Chem., 270, 19495-19500 (1995)); CCR-5 (or "CKR-  
30 5" or "CC-CKR-5") [MIP-1 $\alpha$ , RANTES, MIP-1 $\beta$ ] (Sanson, et al., Biochemistry, 35, 3362-3367 (1996)); and the Duffy blood-group antigen [RANTES, MCP-1] (Chaudhun, et al., J. Biol. Chem., 269, 7835-7838 (1994)). The  $\beta$ -chemokines include eotaxin, MIP ("macrophage inflammatory protein"), MCP ("monocyte chemoattractant protein") and RANTES ("regulation-upon-activation, normal T  
35 expressed and secreted").

Chemokine receptors, such as CCR-1, CCR-2, CCR-2A, CCR-2B, CCR-3, CCR-4, CCR-5, CXCR-3, CXCR-4, have been implicated as being important mediators of inflammatory and immunoregulatory disorders and diseases, including asthma, rhinitis and allergic diseases, as well as autoimmune pathologies such as rheumatoid arthritis and atherosclerosis. A review of the role of chemokines in allergic inflammation is provided by Kita, H., et al., *J. Exp. Med.* **183**, 2421-2426 (1996). Accordingly, agents which modulate chemokine receptors would be useful in such disorders and diseases. Compounds which modulate chemokine receptors would be especially useful in the treatment and prevention of atopic conditions including allergic rhinitis, dermatitis, conjunctivitis, and particularly bronchial asthma.

A retrovirus designated human immunodeficiency virus (HIV-1) is the etiological agent of the complex disease that includes progressive destruction of the immune system (acquired immune deficiency syndrome; AIDS) and degeneration of the central and peripheral nervous system. This virus was previously known as LAV, HTLV-III, or ARV.

Certain compounds have been demonstrated to inhibit the replication of HIV, including soluble CD4 protein and synthetic derivatives (Smith, et al., *Science*, **238**, 1704-1707 (1987)), dextran sulfate, the dyes Direct Yellow 50, Evans Blue, and certain azo dyes (U.S. Patent No. 5,468,469). Some of these antiviral agents have been shown to act by blocking the binding of gp120, the coat protein of HIV, to its target, the CD4 glycoprotein of the cell.

Entry of HIV-1 into a target cell requires cell-surface CD4 and additional host cell cofactors. Fusin has been identified as a cofactor required for infection with virus adapted for growth in transformed T-cells, however, fusin does not promote entry of macrophagetropic viruses which are believed to be the key pathogenic strains of HIV in vivo. It has recently been recognized that for efficient entry into target cells, human immunodeficiency viruses require a chemokine receptors, most probably CCR-5 or CXCR-4, as well as the primary receptor CD4 (Levy, *N. Engl. J. Med.*, **335**(20), 1528-1530 (Nov. 14 1996). The principal cofactor for entry mediated by the envelope glycoproteins of primary macrophage-trophic strains of HIV-1 is CCR5, a receptor for the  $\beta$ -chemokines RANTES, MIP-1 $\alpha$  and MIP-1 $\beta$  (Deng, et al., *Nature*, **381**, 661-666 (1996)). HIV attaches to the CD4 molecule on cells through a region of its envelope protein, gp120. It is believed that the CD-4 binding site on the gp120 of HIV interacts with the CD4 molecule on the cell surface, and undergoes conformational changes which allow it to bind to another

cell-surface receptor, such as CCR5 and/or CXCR-4. This brings the viral envelope closer to the cell surface and allows interaction between gp41 on the viral envelope and a fusion domain on the cell surface, fusion with the cell membrane, and entry of the viral core into the cell. It has been shown that  $\beta$ -chemokine ligands prevent HIV-1 from fusing with the cell (Dragic, et al., Nature, 381, 667-673 (1996)). It has further been demonstrated that a complex of gp120 and soluble CD4 interacts specifically with CCR-5 and inhibits the binding of the natural CCR-5 ligands MIP-1 $\alpha$  and MIP-1 $\beta$  (Wu, et al., Nature, 384, 179-183 (1996); Trkola, et al., Nature, 384, 184-187 (1996)).

Humans who are homozygous for mutant CCR-5 receptors which do not serve as co-receptors for HIV-1 in vitro appear to be unusually resistant to HIV-1 infection and are not immuno-compromised by the presence of this genetic variant (Nature, 382, 722-725 (1996)). Absence of CCR-5 appears to confer substantial protection from HIV-1 infection (Nature, 382, 668-669 (1996)). Other chemokine receptors may be used by some strains of HIV-1 or may be favored by non-sexual routes of transmission. Although most HIV-1 isolates studied to date utilize CCR-5 or fusin, some can use both as well as the related CCR-2B and CCR-3 as co-receptors (Nature Medicine, 2(11), 1240-1243 (1996)). Nevertheless, drugs targeting chemokine receptors may not be unduly compromised by the genetic diversity of HIV-1 (Zhang, et al., Nature, 383, 768 (1996)). Accordingly, an agent which could block chemokine receptors in humans who possess normal chemokine receptors should prevent infection in healthy individuals and slow or halt viral progression in infected patients. By focusing on the host's cellular immune response to HIV infection, better therapies towards all subtypes of HIV may be provided. These results indicate that inhibition of chemokine receptors presents a viable method for the prevention or treatment of infection by HIV and the prevention or treatment of AIDS.

The peptides eotaxin, RANTES, MIP-1 $\alpha$ , MIP-1 $\beta$ , MCP-1, and MCP-3 are known to bind to chemokine receptors. As noted above, the inhibitors of HIV-1 replication present in supernatants of CD8+ T cells have been characterized as the  $\beta$ -chemokines RANTES, MIP-1 $\alpha$  and MIP-1 $\beta$ .

#### SUMMARY OF THE INVENTION

The present invention is directed to compounds which inhibit the entry of human immunodeficiency virus (HIV) into target cells and are of value in the prevention of infection by HIV, the treatment of infection by HIV and the prevention

and/or treatment of the resulting acquired immune deficiency syndrome (AIDS). The present invention also relates to pharmaceutical compositions containing the compounds and to a method of use of the present compounds and other agents for the prevention and treatment of AIDS and viral infection by HIV.

- 5                   The present invention is further directed to compounds which are modulators of chemokine receptor activity and are useful in the prevention or treatment of certain inflammatory and immunoregulatory disorders and diseases, allergic diseases, atopic conditions including allergic rhinitis, dermatitis, conjunctivitis, and asthma, as well as autoimmune pathologies such as rheumatoid
- 10   arthritis and atherosclerosis. The invention is also directed to pharmaceutical compositions comprising these compounds and the use of these compounds and compositions in the prevention or treatment of such diseases in which chemokine receptors are involved.

## DETAILED DESCRIPTION OF THE INVENTION

The present invention is directed to compounds of formula I:

5

I

wherein:

X is  $-(C_{0-2} \text{ alkyl})-Y-(C_{0-6} \text{ alkyl})-$ ,

where the alkyl is unsubstituted or substituted with 1-7 substituents where the substituents are independently selected from:

10

- (a) halo,
- (b) hydroxy,
- (c)  $-O-C_{1-3} \text{ alkyl}$ , and
- (d) trifluoromethyl,

where Y is selected from:

15

$-(CO)-$ ,  $-(CO)O-$ ,  $-O(CO)-$ ,  $-(CO)NR^9-$ ,  $-NR^9(CO)-$ ,  
 $-O(CO)NR^9-$ ,  $-NR^9(CO)O-$ , and  $-NR^9(CO)NR^{10}-$ ,

where  $R^9$  is independently selected from: hydrogen,  $C_{1-10}$  alkyl,  $C_{3-6}$  cycloalkyl,  $C_{1-6}$  alkyl- $C_{3-6}$  cycloalkyl,  $C_{2-10}$  alkenyl,  $C_{2-10}$  alkynyl, benzyl or phenyl, which is unsubstituted or substituted with 1-3 substituents where the substituents are independently selected from: halo,  $C_{1-3}$  alkyl,  $C_{1-3}$  alkoxy and trifluoromethyl,

20

and where  $R^{10}$  is independently selected from: hydrogen,  $C_{1-6}$  alkyl, benzyl, or phenyl, which is unsubstituted or substituted with 1-3 substituents where the substituents are independently selected from: halo,  $C_{1-3}$  alkyl,  $C_{1-3}$  alkoxy and trifluoromethyl,

25

or where  $R^9$  and  $R^{10}$  may be joined together to form a 5-8 membered ring which may be unsubstituted or substituted with halo,  $C_{1-3}$  alkyl, and  $C_{1-3}$  alkoxy;

5  $R^1$  is selected from:

- (1)  $-CO_2H$ ,
- (2)  $-NO_2$ ,
- (3)  $-tetrazolyl$ ,
- (4)  $-hydroxyisoxazole$ ,
- 10 (5)  $-SO_2NHCO-(C_{0-3} \text{ alkyl})-R^9$ , and
- (6)  $-P(O)(OH)_2$ ;

$R^3$  is selected from the group consisting of:

phenyl and heterocycle,

15 which is unsubstituted or substituted with 1-7 substituents where the substituents are independently selected from:

- (a) halo,
- (b) trifluoromethyl,
- (c) hydroxy,
- 20 (d)  $C_{1-3}$  alkyl,
- (e)  $-O-C_{1-3}$  alkyl,
- (f)  $-CO_2R^9$ ,
- (g)  $-NR^9R^{10}$ , and
- (h)  $-CONR^9R^{10}$ ;

25

$R^4$ ,  $R^5$  and  $R^6$  are independently selected from:

hydrogen,  $C_{1-10}$  alkyl,  $C_{3-8}$  cycloalkyl,  $C_{2-10}$  alkenyl,

$C_{2-10}$  alkynyl, phenyl,  $-(C_{1-6} \text{ alkyl})$ -phenyl,

$-(C_{1-6} \text{ alkyl})$ - $C_{3-8}$  cycloalkyl, naphthyl, biphenyl, and heterocycle,

30

which is unsubstituted or substituted with 1-7 of  $R^{11}$  where  $R^{11}$  is independently selected from:

- (a) halo,
- (b) trifluoromethyl,
- (c) hydroxy,

- 5
- (d) C<sub>1-3</sub> alkyl,
  - (e) -O-C<sub>1-3</sub> alkyl,
  - (f) -CO<sub>2</sub>R<sup>9</sup>,
  - (g) -NR<sup>9</sup>R<sup>10</sup>, and
  - (h) -CONR<sup>9</sup>R<sup>10</sup>,

or where R<sup>4</sup> and R<sup>5</sup> may be joined together to form a 3-8 membered saturated ring which may be unsubstituted or substituted with 1-7 of R<sup>11</sup>,

or where R<sup>5</sup> and R<sup>6</sup> may be joined together to form a 3-8 membered saturated ring which may be unsubstituted or substituted with 1-7 of R<sup>11</sup>;

10

R<sup>7</sup> is selected from:

- (1) hydrogen,
  - (2) C<sub>1-6</sub> alkyl, which is unsubstituted or substituted with 1-4 substituents where the substituents are independently selected from: hydroxy, cyano, and halo,
  - (3) hydroxy, and
  - (4) halo;
- 15

R<sup>8</sup> is selected from:

- 20 hydrogen, phenyl, naphthyl, biphenyl, and heterocycle, which is unsubstituted or substituted with 1-7 of R<sup>12</sup> where R<sup>12</sup> is independently selected from:
- (a) halo,
  - (b) cyano,
  - (c) hydroxy,
  - (d) C<sub>1-6</sub> alkyl, which is unsubstituted or substituted with 1-5 of R<sup>13</sup> where R<sup>13</sup> is independently selected from: halo, cyano, hydroxy, C<sub>1-6</sub> alkoxy, -CO<sub>2</sub>H, -CO<sub>2</sub>(C<sub>1-6</sub> alkyl), phenyl, trifluoromethyl, and -NR<sup>9</sup>R<sup>10</sup>,
  - (e) -O-C<sub>1-6</sub> alkyl, which is unsubstituted or substituted with 1-5 of R<sup>13</sup>,
  - (f) -CF<sub>3</sub>,
  - (g) -CHF<sub>2</sub>,
- 25
- 30

- 5 (h) -CH<sub>2</sub>F,  
 (i) -NO<sub>2</sub>,  
 (j) phenyl,  
 (k) -CO<sub>2</sub>R<sup>9</sup>,  
 (l) tetrazolyl,  
 (m) -NR<sup>9</sup>R<sup>10</sup>,  
 (n) -NR<sup>9</sup>-COR<sup>10</sup>,  
 (o) -NR<sup>9</sup>-CO<sub>2</sub>R<sup>10</sup>,  
 (p) -CO-NR<sup>9</sup>R<sup>10</sup>,  
 10 (q) -OCO-NR<sup>9</sup>R<sup>10</sup>,  
 (r) -NR<sup>9</sup>CO-NR<sup>9</sup>R<sup>10</sup>,  
 (s) -S(O)<sub>m</sub>-R<sup>9</sup>, wherein m is an integer selected from 0, 1 and 2,  
 (t) -S(O)<sub>2</sub>-NR<sup>9</sup>R<sup>10</sup>,  
 (u) -NR<sup>9</sup>S(O)<sub>2</sub>-R<sup>10</sup>, and  
 15 (v) -NR<sup>9</sup>S(O)<sub>2</sub>-NR<sup>9</sup>R<sup>10</sup>;

n is an integer selected from 1, 2, 3 and 4;

x is an integer selected from 0, 1 and 2, and y is an integer selected from 0, 1 and 2,  
 with the proviso that the sum of x and y is 2;

20

and pharmaceutically acceptable salts thereof and individual diastereomers thereof.

One embodiment of the present invention is a compound of Formula I,  
 wherein

25

R<sup>1</sup> is selected from:

- (1) -CO<sub>2</sub>H,  
 (2) -NO<sub>2</sub>,  
 (3) -tetrazolyl,  
 30 (4) -hydroxyisoxazole, and  
 (5) -P(O)(OH)<sub>2</sub>;

and all other variables are as previously defined;

and pharmaceutically acceptable salts thereof and individual diastereomers thereof.

Preferred compounds of the present invention include those of formula

Ia:

5

Ia

wherein  $R^1$ ,  $R^3$ ,  $R^4$ ,  $R^5$ ,  $R^6$ ,  $R^7$ ,  $R^8$ ,  $X$  and  $n$  are defined herein;

and pharmaceutically acceptable salts and individual diastereomers thereof.

More preferred compounds of the present invention include those of

10 formula Ic:

Ic

wherein  $R^1$ ,  $R^3$ ,  $R^4$ ,  $R^5$ ,  $R^6$ ,  $R^7$ ,  $R^8$  and  $X$  are defined herein;

and pharmaceutically acceptable salts and individual diastereomers thereof.

15

Highly preferred compounds of the present invention include those of formula Id:

Id

wherein  $R^3$ ,  $R^4$ ,  $R^5$ ,  $R^6$ ,  $R^8$  and X are defined herein;

and pharmaceutically acceptable salts and individual diastereomers thereof.

5 More highly preferred compounds of the present invention include those of formula Ie:

Ie

wherein  $R^4$ ,  $R^5$ ,  $R^6$ ,  $R^8$  and X are defined herein;

10 and pharmaceutically acceptable salts and individual diastereomers thereof.

In the present invention it is preferred that  $R^1$  is selected from:

- (1)  $-\text{CO}_2\text{H}$ ,
- (2)  $-\text{P}(\text{O})(\text{OH})_2$ , and
- 15 (3)  $-\text{tetrazolyl}$ .

In the present invention it is more preferred that  $R^1$  is selected from:

- (1)  $-\text{CO}_2\text{H}$ , and
- (2)  $-\text{tetrazolyl}$ .

5 In the present invention it is even more preferred that  $R^1$  is  $-\text{CO}_2\text{H}$ .

In the present invention it is preferred that  $R^3$  is selected from the group consisting of:

phenyl and thienyl,

10 which may be unsubstituted or substituted with 1-5 substituents where the substituents are independently selected from:

- (a) halo,
- (b) trifluoromethyl,
- (c) hydroxy,
- 15 (d)  $\text{C}_{1-3}$  alkyl, and
- (e)  $-\text{O}-\text{C}_{1-3}$  alkyl.

In the present invention it is more preferred that  $R^3$  is selected from the group consisting of:

20 phenyl and thienyl,

which may be unsubstituted or substituted with 1-5 substituents where the substituents are independently selected from:

- (a) fluoro,
- (b) chloro,
- 25 (c) trifluoromethyl,
- (d) hydroxy, and
- (e)  $\text{C}_{1-3}$  alkyl.

In the present invention it is even more preferred that  $R^3$  is selected from the group consisting of:

30 phenyl, which may be unsubstituted or substituted with 1-5 substituents where the substituents are independently selected from:

- (a) fluoro, and
- (b) chloro; and

unsubstituted thienyl.

In the present invention it is still more preferred that R<sup>3</sup> is unsubstituted phenyl, (3-fluoro)phenyl or 3-thienyl.

5

In the present invention it is preferred that R<sup>4</sup> is hydrogen or C<sub>1-6</sub> alkyl.

10

In the present invention it is more preferred that R<sup>4</sup> is hydrogen.

In the present invention it is preferred that R<sup>5</sup> is selected from: hydrogen, C<sub>1-6</sub> alkyl, C<sub>3-8</sub> cycloalkyl, C<sub>1-6</sub> alkyl-C<sub>3-8</sub> cycloalkyl, and phenyl.

15

In the present invention it is more preferred that R<sup>5</sup> is selected from: hydrogen, methyl, n-propyl, isopropyl, n-butyl, t-butyl, isobutyl, sec-butyl, cyclohexyl, -CH<sub>2</sub>-cyclopropyl, -CH<sub>2</sub>-cyclobutyl, and phenyl.

20

In the present invention it is still more preferred that R<sup>5</sup> is selected from: isopropyl, isobutyl, sec-butyl, and cyclohexyl.

In the present invention it is preferred that R<sup>6</sup> is selected from: hydrogen, C<sub>1-6</sub> alkyl, C<sub>3-8</sub> cycloalkyl, C<sub>1-6</sub> alkyl-C<sub>3-8</sub> cycloalkyl, and phenyl.

25

In the present invention it is more preferred that R<sup>6</sup> is selected from: hydrogen, methyl, n-butyl, t-butyl, isobutyl, sec-butyl, -CH<sub>2</sub>-cyclopropyl, -CH<sub>2</sub>-cyclobutyl, and cyclohexyl.

30

In the present invention it is still more preferred that R<sup>6</sup> is selected from: hydrogen, methyl, -CH<sub>2</sub>-cyclopropyl, -CH<sub>2</sub>-cyclobutyl, and cyclohexyl.

In an alternate embodiment of the present invention it is preferred that R<sup>5</sup> and R<sup>6</sup> are joined together to form a C<sub>3-8</sub> cycloalkyl ring.

In an alternate embodiment of the present invention it is more preferred that R<sup>5</sup> and R<sup>6</sup> are joined together to form a pyrrolidine ring.

5 In the present invention it is preferred that R<sup>7</sup> is hydrogen, fluoro, hydroxy or C<sub>1-6</sub> alkyl.

In the present invention it is more preferred that R<sup>7</sup> is hydrogen or fluoro.

10 In the present invention it is even more preferred that R<sup>7</sup> is hydrogen.

In the present invention it is preferred that X is:  
-(C<sub>0-2</sub> alkyl)-Y-(C<sub>0-4</sub> alkyl)-,

15 where the alkyl is unsubstituted or substituted with 1-7 substituents where the substituents are independently selected from:

- (a) halo,
- (b) hydroxy,
- (c) -O-C<sub>1-3</sub> alkyl, and
- (d) trifluoromethyl,

20 where Y is selected from:

-(CO)NR<sup>9</sup>-, -NR<sup>9</sup>(CO)-, -O(CO)NR<sup>9</sup>-, -NR<sup>9</sup>(CO)O-, and  
-NR<sup>9</sup>(CO)NR<sup>10</sup>-,

25 where R<sup>9</sup> is independently selected from: hydrogen, C<sub>1-10</sub> alkyl, C<sub>3-6</sub> cycloalkyl, C<sub>1-6</sub> alkyl-C<sub>3-6</sub> cycloalkyl, C<sub>2-10</sub> alkenyl, C<sub>2-10</sub> alkynyl, benzyl or phenyl, which is unsubstituted or substituted with 1-3 substituents where the substituents are independently selected from: halo, C<sub>1-3</sub> alkyl, C<sub>1-3</sub> alkoxy and trifluoromethyl,

30 and where R<sup>10</sup> is independently selected from: hydrogen, C<sub>1-6</sub> alkyl, benzyl, or phenyl, which is unsubstituted or substituted with 1-3 substituents where the substituents are independently selected from: halo, C<sub>1-3</sub> alkyl, C<sub>1-3</sub> alkoxy and trifluoromethyl,

or where R<sup>9</sup> and R<sup>10</sup> may be joined together to form a 5-8 membered ring which is unsubstituted.

In the present invention it is more preferred that X is:

-Y-(C<sub>0-4</sub> alkyl)-,

where the alkyl is unsubstituted,

where Y is selected from:

5                   -O(CO)NR<sup>9</sup>-, -NR<sup>9</sup>(CO)O-, and -NR<sup>9</sup>(CO)NR<sup>10</sup>-,

where R<sup>9</sup> is independently selected from: hydrogen, C<sub>1-10</sub> alkyl, C<sub>2-10</sub> alkenyl, and C<sub>1-6</sub> alkyl-C<sub>3-6</sub> cycloalkyl,

where R<sup>10</sup> is independently selected from: hydrogen and C<sub>1-6</sub> alkyl,

or where R<sup>9</sup> and R<sup>10</sup> may be joined together to form a 5-8 membered ring

10                   which is unsubstituted.

In the present invention it is even more preferred that X is selected from:

15                   -(CO)NR<sup>9</sup>-, -(CO)NR<sup>9</sup>CH<sub>2</sub>-, -NR<sup>9</sup>(CO)O-, -NR<sup>9</sup>(CO)OCH<sub>2</sub>-,

                  -NR<sup>9</sup>(CO)NR<sup>10</sup>-, and -NR<sup>9</sup>(CO)NR<sup>10</sup>CH<sub>2</sub>-,

where R<sup>9</sup> is independently selected from: hydrogen, C<sub>1-10</sub> alkyl, C<sub>2-10</sub> alkenyl, and C<sub>1-6</sub> alkyl-C<sub>3-6</sub> cycloalkyl,

where R<sup>10</sup> is independently selected from: hydrogen and C<sub>1-6</sub> alkyl,

or where R<sup>9</sup> and R<sup>10</sup> may be joined together to form a 5-8 membered ring

20                   which is unsubstituted.

In an aspect of the preceding embodiment, in the present invention it is even more preferred that X is selected from:

25                   -(CO)NR<sup>9</sup>-, -NR<sup>9</sup>(CO)O-, and -NR<sup>9</sup>(CO)NR<sup>10</sup>-,

where R<sup>9</sup> is independently selected from: hydrogen, C<sub>1-10</sub> alkyl, C<sub>2-10</sub> alkenyl, and C<sub>1-6</sub> alkyl-C<sub>3-6</sub> cycloalkyl,

where R<sup>10</sup> is independently selected from: hydrogen and C<sub>1-6</sub> alkyl,

or where R<sup>9</sup> and R<sup>10</sup> may be joined together to form a 5-8 membered ring

30                   which is unsubstituted.

In the present invention it is still more preferred that X is selected from:

                  -NR<sup>9</sup>(CO)O-, -NR<sup>9</sup>(CO)OCH<sub>2</sub>-, -NR<sup>9</sup>(CO)NH-, and -NR<sup>9</sup>(CO)NHCH<sub>2</sub>-,

where  $R^9$  is independently selected from: methyl, ethyl, n-propyl, allyl, and -CH<sub>2</sub>-cyclopropyl.

In an aspect of the preceding embodiment, in the present invention it is  
5 still more preferred that X is selected from:

-NR<sup>9</sup>(CO)O-, and -NR<sup>9</sup>(CO)NH-,

where  $R^9$  is independently selected from: methyl, ethyl, n-propyl, allyl, and -CH<sub>2</sub>-cyclopropyl.

10 In the present invention it is preferred that  $R^8$  is hydrogen or phenyl, which is unsubstituted or substituted with 1-7 substituents where the substituents are independently selected from:

- (a) halo,
- (b) cyano,
- 15 (c) hydroxy,
- (d) C<sub>1-6</sub> alkyl, which is unsubstituted or substituted with 1-5 of  $R^{13}$  where  $R^{13}$  is independently selected from: halo, cyano, hydroxy, C<sub>1-6</sub> alkoxy, -CO<sub>2</sub>H, phenyl, -CO<sub>2</sub>(C<sub>1-6</sub> alkyl), trifluoromethyl, and -NR<sup>9</sup>R<sup>10</sup>, wherein  $R^9$  and  $R^{10}$  are independently selected from: hydrogen, C<sub>1-6</sub> alkyl, C<sub>5-6</sub> cycloalkyl, benzyl or phenyl, which is unsubstituted or substituted with 1-3 substituents where the substituents are independently selected from: halo, C<sub>1-3</sub> alkyl, C<sub>1-3</sub> alkoxy and trifluoromethyl;
- 20 (e) -O-C<sub>1-6</sub> alkyl, which is unsubstituted or substituted with 1-5 of  $R^{13}$ ,
- (f) -CF<sub>3</sub>,
- (g) -CHF<sub>2</sub>,
- (h) -CH<sub>2</sub>F,
- 25 (i) -NO<sub>2</sub>,
- 30 (j) phenyl,
- (k) -CO<sub>2</sub>R<sup>9</sup>,
- (l) tetrazolyl,
- (m) -NR<sup>9</sup>R<sup>10</sup>,

- (n) -NR<sup>9</sup>-COR<sup>10</sup>,
- (o) -NR<sup>9</sup>-CO<sub>2</sub>R<sup>10</sup>,
- (p) -CO-NR<sup>9</sup>R<sup>10</sup>,
- (q) -OCO-NR<sup>9</sup>R<sup>10</sup>,
- 5 (r) -NR<sup>9</sup>CO-NR<sup>9</sup>R<sup>10</sup>,
- (s) -S(O)<sub>m</sub>-R<sup>9</sup>, wherein m is an integer selected from 0, 1 and 2,
- (t) -S(O)<sub>2</sub>-NR<sup>9</sup>R<sup>10</sup>,
- (u) -NR<sup>9</sup>S(O)<sub>2</sub>-R<sup>10</sup>, and
- (v) -NR<sup>9</sup>S(O)<sub>2</sub>-NR<sup>9</sup>R<sup>10</sup>.

10

In the present invention it is more preferred that R<sup>8</sup> is phenyl which is unsubstituted or substituted with 1-5 substituents where the substituents are independently selected from:

- (a) halo,
- 15 (b) cyano,
- (c) -NO<sub>2</sub>,
- (d) -CF<sub>3</sub>,
- (e) -CHF<sub>2</sub>,
- (f) -CH<sub>2</sub>F,
- 20 (g) tetrazolyl,
- (h) C<sub>1-6</sub> alkyl, which is unsubstituted or substituted with phenyl, and
- (i) -O-C<sub>1-6</sub> alkyl.

25

In the present invention it is even more preferred that R<sup>8</sup> is phenyl, which is unsubstituted or substituted with 1-3 substituents where the substituents are independently selected from:

- (a) fluoro,
- (b) chloro,
- 30 (c) cyano,
- (d) -NO<sub>2</sub>,
- (e) C<sub>1-6</sub> alkyl, which is unsubstituted or substituted with phenyl, and
- (f) -CF<sub>3</sub>.

In the present invention it is still more preferred that  $R^8$  is selected from: phenyl, 4-chlorophenyl, 2-fluorophenyl, 3-fluorophenyl, 4-fluorophenyl, 2,4-difluorophenyl, 3,4-difluorophenyl, 3,5-difluorophenyl, 4-methylphenyl, 3-nitrophenyl, 4-nitrophenyl, and 4-trifluoromethylphenyl.

In the present invention it is preferred that  $n$  is an integer selected from 1, 2 and 3.

10

In the present invention it is more preferred that  $n$  is an integer which is 1.

In the present invention it is preferred that  $x$  is an integer which is 1 and  $y$  is an integer which is 1.

15

It is to be understood that embodiments of the present invention include, but are not limited to, compounds of formula I wherein  $R^1$ ,  $R^3$ ,  $R^4$ ,  $R^5$ ,  $R^6$ ,  $R^7$ ,  $R^8$ ,  $X$ ,  $n$ ,  $x$ , and  $y$  are defined in accordance with one of the embodiments or aspects thereof as set forth above. Any and all possible combinations of preferred, more preferred, even more preferred, highly preferred, more highly preferred, and most preferred definitions of these variables in formulas I are within the scope of the present invention.

20

The compounds of the instant invention have at least two asymmetric centers at the ring junction of the substituents bearing the piperidine and  $R^3$ . Additional asymmetric centers may be present depending upon the nature of the various substituents on the molecule. Each such asymmetric center will independently produce two optical isomers and it is intended that all of the possible optical isomers and diastereomers in mixtures and as pure or partially purified compounds are included within the ambit of this invention. The relative configurations of the more preferred compounds of this invention are of the trans orientation, i.e. as depicted:

30

The relative configurations of the even more preferred compounds of this invention wherein  $R^6$  is hydrogen, methyl or wherein  $R^5$  and  $R^6$  form a pyrrolidine ring with respect to the configuration of the nitrogen substituent on the cyclopentane ring is cis to the orientation of  $R^3$  as depicted:

The relative configurations of the most preferred compounds of this invention wherein  $R^6$  is hydrogen or methyl with respect to the configuration of the nitrogen substituent on the cyclopentane ring is is cis to the orientation of  $R^3$  and with the (R)-stereochemistry of the nitrogen side chain of the orientation as depicted:

The relative configurations of the even more preferred compounds of this invention wherein R<sup>6</sup> is other than hydrogen or methyl with respect to the configuration of the nitrogen substituent on the cyclopentane ring is 1,3-cis of the orientation as depicted:

The independent syntheses of these diastereomers or their chromatographic separations may be achieved as known in the art by appropriate modification of the methodology disclosed herein. Their absolute stereochemistry may be determined by the x-ray crystallography of crystalline products or crystalline intermediates which are derivatized, if necessary, with a reagent containing an asymmetric center of known absolute configuration.

As appreciated by those of skill in the art, halo or halogen as used herein are intended to include chloro, fluoro, bromo and iodo. Similarly, C<sub>1-8</sub>, as in C<sub>1-8</sub> alkyl is defined to identify the group as having 1, 2, 3, 4, 5, 6, 7 or 8 carbons in a

linear or branched arrangement, such that C<sub>1-8</sub> alkyl specifically includes methyl, ethyl, propyl, butyl, pentyl, hexyl, heptyl and octyl. Likewise, C<sub>0</sub>, as in C<sub>0</sub> alkyl is defined to identify the presence of a direct covalent bond.

The term "heterocycle" (which may alternatively be referred to as  
 5 "heterocyclic") refers to a 4- to 8-membered monocyclic ring, a 7- to 11-membered bicyclic system, or a 10 to 15-membered tricyclic ring system, any ring of which is saturated or unsaturated (partially or totally), and which consists of carbon atoms and one or more heteroatoms (e.g., from 1 to 4 heteroatoms) selected from N, O and S, and wherein the nitrogen and sulfur heteroatoms may optionally be oxidized, the  
 10 nitrogen heteroatom may optionally be quaternized, and a ring carbon may optionally be oxidized (i.e., is substituted with oxo). The heterocyclic ring may be attached at any heteroatom or carbon atom, provided that attachment results in the creation of a stable structure. A preferred heterocycle is a 4- to 8-membered monocyclic ring or a 7- to 11-membered bicyclic system, as defined and described above.

15 The term "heterocycle" as used herein is intended to include the following groups: benzoimidazolyl, benzofuranyl, benzofurazanyl, benzopyrazolyl, benzotriazolyl, benzothiophenyl, benzoxazolyl, carbazolyl, carbolinyl, cinnolinyl, furanyl, imidazolyl, indolinyl, indolyl, indolaziny, indazolyl, isobenzofuranyl, isoindolyl, isoquinolyl, isothiazolyl, isoxazolyl, naphthpyridinyl, oxadiazolyl,  
 20 oxazolyl, oxetanyl, pyranyl, pyrazinyl, pyrazolyl, pyridazinyl, pyridopyridinyl, pyridazinyl, pyridyl, pyrimidyl, pyrrolyl, quinazolinyl, quinolyl, quinoxaliny, tetrahydropyranyl, tetrazolyl, tetrazolopyridyl, thiadiazolyl, thiazolyl, thienyl, triazolyl, azetidyl, 1,4-dioxanyl, hexahydroazepinyl, piperazinyl, piperidinyl, pyrrolidinyl, morpholinyl, thiomorpholinyl, dihydrobenzoimidazolyl,  
 25 dihydrobenzofuranyl, dihydrobenzothiophenyl, dihydrobenzoxazolyl, dihydrofuranyl, dihydroimidazolyl, dihydroindolyl, dihydroisooxazolyl, dihydroisothiazolyl, dihydrooxadiazolyl, dihydrooxazolyl, dihydropyrazinyl, dihydropyrazolyl, dihydropyridinyl, dihydropyrimidinyl, dihydropyrrolyl, dihydroquinolinyl, dihydrotetrazolyl, dihydrothiadiazolyl, dihydrothiazolyl, dihydrothienyl,  
 30 dihydrotriazolyl, dihydroazetidyl, methylenedioxybenzoyl, tetrahydrofuranyl, and tetrahydrothienyl, and N-oxides thereof.

The term "heterocycle" as used herein is also intended to include, but is not limited to, the following groups: methylenedioxyphenyl, imidazopyridyl, imidazopyrimidinyl, imidazopyridazinyl, imidazopyrazinyl, imidazotriazinyl,

imidazothioephyl, pyrazolopyridyl, pyrazolopyrimidinyl, pyrazolopyridazinyl,  
pyrazolopyrazinyl, pyrazolotriazinyl, pyrazolothiophenyl, triazolopyridyl,  
triazolopyrimidinyl, triazolopyridazinyl, triazolopyrazinyl, triazolothiophenyl,  
tetrahydroimidazopyridinyl, tetrahydropyrazolopyridinyl, tetrahydrotriazopyridinyl,  
5 tetrahydrotriazolopyridazinyl, and tetrahydroindazolyl.

The term "heterocycle" as used herein is also intended to include, but is  
not limited to, the following groups: tetrahydroimidazopyrimidyl,  
tetrahydroimidazopyrazinyl, tetrahydroimidazopyridazinyl,  
tetrahydrotriazolopyrimidyl, tetrahydrotriazolopyrazinyl, tetrahydropyrazolopyrimidyl,  
10 tetrahydropyrazolopyrazinyl, imidazothiazolyl, and imidazothiadiazolyl.

The term "heterocycle" as used herein is also intended to include, but is  
not limited to, oxopyridinyl (e.g., 2-oxopyridinyl), oxopiperidinyl, and oxopyrazolyl.

The terms "thiophenyl" and "thienyl" have the same meaning herein  
and are used interchangeably. Similarly, the following pairs of terms are used  
15 interchangeably: "indazolyl" and "benzopyrazolyl"; "pyridinyl" and "pyridyl".

In the expression "... which is unsubstituted or substituted with ...",  
"which" is intended to refer back to all preceding chemical groups in the particular  
definition in which the expression appears, unless a contrary meaning is expressed or  
is implied by the context. Furthermore, the term "substituted" in the expression  
20 includes mono- and poly-substitution by a named substituent to the extent such single  
and multiple substitution is chemically allowed in any of the named chemical groups.  
Thus, for example, the expression "is independently selected from: hydrogen, C<sub>1-6</sub>  
alkyl, C<sub>5-6</sub> cycloalkyl, benzyl or phenyl, which is unsubstituted or substituted with 1-  
3 substituents ...", encompasses hydrogen, C<sub>1-6</sub> alkyl, C<sub>5-6</sub> cycloalkyl, benzyl,  
25 phenyl, mono- and di- and tri-substituted C<sub>1-6</sub> alkyl, mono- and di- and tri-substituted  
C<sub>5-6</sub> cycloalkyl, mono- and di- and tri-substituted benzyl and mono- and di- and tri-  
substituted phenyl.

Exemplifying the invention is the use of the compounds disclosed in  
the Examples and herein.

30 Specific compounds within the present invention include a compound  
which is selected from the group consisting of:

5

5

5

5

5

5

5

5 and pharmaceutically acceptable salts thereof and individual diastereomers thereof.

The subject compounds are useful in a method of modulating chemokine receptor activity in a patient in need of such modulation comprising the administration of an effective amount of the compound.

10 The present invention is directed to the use of the foregoing compounds as modulators of chemokine receptor activity. In particular, these compounds are useful as modulators of the chemokine receptors, including CCR-5 and/or CCR-3.

The utility of the compounds in accordance with the present invention as modulators of chemokine receptor activity may be demonstrated by methodology  
 15 known in the art, such as the assay for chemokine binding as disclosed by Van Riper, et al., *J. Exp. Med.*, **177**, 851-856 (1993) which may be readily adapted for measurement of CCR-5 binding, and the assay for CCR-3 binding as disclosed by Daugherty, et al., *J. Exp. Med.*, **183**, 2349-2354 (1996). Cell lines for expressing the receptor of interest include those naturally expressing the receptor, such as EOL-3 or  
 20 THP-1, or a cell engineered to express a recombinant receptor, such as CHO, RBL-2H3, HEK-293. For example, a CCR3 transfected AML14.3D10 cell line has been

placed on restricted deposit with American Type Culture Collection in Rockville, Maryland as ATCC No. CRL-12079, on April 5, 1996. The utility of the compounds in accordance with the present invention as inhibitors of the spread of HIV infection in cells may be demonstrated by methodology known in the art, such as the HIV  
5 quantitation assay disclosed by Nunberg, et al., *J. Virology*, **65** (9), 4887-4892 (1991).

In particular, the compounds of the following examples had activity in binding to the CCR-5 or the CCR-3 receptor in the aforementioned assays, generally with an IC<sub>50</sub> of less than about 1  $\mu$ M. Such a result is indicative of the intrinsic activity of the compounds in use as modulators of chemokine receptor activity.

10 Mammalian chemokine receptors provide a target for interfering with or promoting eosinophil and/or lymphocyte function in a mammal, such as a human. Compounds which inhibit or promote chemokine receptor function, are particularly useful for modulating eosinophil and/or lymphocyte function for therapeutic purposes. Accordingly, the present invention is directed to compounds which are useful in the  
15 prevention and/or treatment of a wide variety of inflammatory and immunoregulatory disorders and diseases, allergic diseases, atopic conditions including allergic rhinitis, dermatitis, conjunctivitis, and asthma, as well as autoimmune pathologies such as rheumatoid arthritis and atherosclerosis.

For example, an instant compound which inhibits one or more  
20 functions of a mammalian chemokine receptor (e.g., a human chemokine receptor) may be administered to inhibit (i.e., reduce or prevent) inflammation. As a result, one or more inflammatory processes, such as leukocyte emigration, chemotaxis, exocytosis (e.g., of enzymes, histamine) or inflammatory mediator release, is inhibited. For example, eosinophilic infiltration to inflammatory sites (e.g., in  
25 asthma) can be inhibited according to the present method.

Similarly, an instant compound which promotes one or more functions of a mammalian chemokine receptor (e.g., a human chemokine) is administered to stimulate (induce or enhance) an inflammatory response, such as leukocyte  
emigration, chemotaxis, exocytosis (e.g., of enzymes, histamine) or inflammatory  
30 mediator release, resulting in the beneficial stimulation of inflammatory processes. For example, eosinophils can be recruited to combat parasitic infections.

In addition to primates, such as humans, a variety of other mammals can be treated according to the method of the present invention. For instance, mammals including, but not limited to, cows, sheep, goats, horses, dogs, cats, guinea  
35 pigs, rats or other bovine, ovine, equine, canine, feline, rodent or murine species can

be treated. However, the method can also be practiced in other species, such as avian species (e.g., chickens).

Diseases and conditions associated with inflammation and infection can be treated using the method of the present invention. In a preferred embodiment, the disease or condition is one in which the actions of eosinophils and/or lymphocytes are to be inhibited or promoted, in order to modulate the inflammatory response.

Diseases or conditions of humans or other species which can be treated with inhibitors of chemokine receptor function, include, but are not limited to: inflammatory or allergic diseases and conditions, including respiratory allergic diseases such as asthma, particularly bronchial asthma, allergic rhinitis, hypersensitivity lung diseases, hypersensitivity pneumonitis, eosinophilic pneumonias (e.g., Loeffler's syndrome, chronic eosinophilic pneumonia), delayed-type hypersensitivity, interstitial lung diseases (ILD) (e.g., idiopathic pulmonary fibrosis, or ILD associated with rheumatoid arthritis, systemic lupus erythematosus, ankylosing spondylitis, systemic sclerosis, Sjogren's syndrome, polymyositis or dermatomyositis); systemic anaphylaxis or hypersensitivity responses, drug allergies (e.g., to penicillin, cephalosporins), insect sting allergies; autoimmune diseases, such as rheumatoid arthritis, psoriatic arthritis, multiple sclerosis, systemic lupus erythematosus, myasthenia gravis, juvenile onset diabetes; glomerulonephritis, autoimmune thyroiditis, Behcet's disease; graft rejection (e.g., in transplantation), including allograft rejection or graft-versus-host disease; inflammatory bowel diseases, such as Crohn's disease and ulcerative colitis; spondyloarthropathies; scleroderma; psoriasis (including T-cell mediated psoriasis) and inflammatory dermatoses such as dermatitis, eczema, atopic dermatitis, allergic contact dermatitis, urticaria; vasculitis (e.g., necrotizing, cutaneous, and hypersensitivity vasculitis); eosinophilic myositis, eosinophilic fasciitis; cancers with leukocyte infiltration of the skin or organs. Other diseases or conditions in which undesirable inflammatory responses are to be inhibited can be treated, including, but not limited to, reperfusion injury, atherosclerosis, certain hematologic malignancies, cytokine-induced toxicity (e.g., septic shock, endotoxic shock), polymyositis, dermatomyositis.

Diseases or conditions of humans or other species which can be treated with promoters of chemokine receptor function, include, but are not limited to: immunosuppression, such as that in individuals with immunodeficiency syndromes such as AIDS, individuals undergoing radiation therapy, chemotherapy, therapy for autoimmune disease or other drug therapy (e.g., corticosteroid therapy), which causes

immunosuppression; immunosuppression due congenital deficiency in receptor function or other causes; and infectious diseases, such as parasitic diseases, including, but not limited to helminth infections, such as nematodes (round worms); (Trichuriasis, Enterobiasis, Ascariasis, Hookworm, Strongyloidiasis, Trichinosis, 5 filariasis); trematodes (flukes) (Schistosomiasis, Clonorchiasis), cestodes (tape worms) (Echinococcosis, Taeniasis saginata, Cysticercosis); visceral worms, visceral larva migrans (e.g., Toxocara), eosinophilic gastroenteritis (e.g., Anisaki spp., *Phocanema ssp.*), cutaneous larva migrans (*Ancylostoma braziliense*, *Ancylostoma caninum*).

10           The compounds of the present invention are accordingly useful in the prevention and treatment of a wide variety of inflammatory and immunoregulatory disorders and diseases, allergic conditions, atopic conditions, as well as autoimmune pathologies.

          In another aspect, the instant invention may be used to evaluate  
15   putative specific agonists or antagonists of chemokine receptors, including CCR-5 and/or CCR-3. Accordingly, the present invention is directed to the use of these compounds in the preparation and execution of screening assays for compounds which modulate the activity of chemokine receptors. For example, the compounds of this invention are useful for isolating receptor mutants, which are excellent screening  
20   tools for more potent compounds. Furthermore, the compounds of this invention are useful in establishing or determining the binding site of other compounds to chemokine receptors, e.g., by competitive inhibition. The compounds of the instant invention are also useful for the evaluation of putative specific modulators of the chemokine receptors, including CCR-5 and/or CCR-3. As appreciated in the art,  
25   thorough evaluation of specific agonists and antagonists of the above chemokine receptors has been hampered by the lack of availability of non-peptidyl (metabolically resistant) compounds with high binding affinity for these receptors. Thus the compounds of this invention are commercial products to be sold for these purposes.

          The present invention is further directed to a method for the  
30   manufacture of a medicament for modulating chemokine receptor activity in humans and animals comprising combining a compound of the present invention with a pharmaceutical carrier or diluent.

          The present invention is further directed to the use of these compounds in the prevention or treatment of infection by a retrovirus, in particular, the human  
35   immunodeficiency virus (HIV) and the treatment of, and delaying of the onset of

consequent pathological conditions such as AIDS. Treating AIDS or preventing or treating infection by HIV is defined as including, but not limited to, treating a wide range of states of HIV infection: AIDS, ARC (AIDS related complex), both symptomatic and asymptomatic, and actual or potential exposure to HIV. For  
5 example, the compounds of this invention are useful in treating infection by HIV after suspected past exposure to HIV by, e.g., blood transfusion, organ transplant, exchange of body fluids, bites, accidental needle stick, or exposure to patient blood during surgery.

In a preferred aspect of the present invention, a subject compound may  
10 be used in a method of inhibiting the binding of a chemokine to a chemokine receptor, such as CCR-5 or CCR-3, of a target cell, which comprises contacting the target cell with an amount of the compound which is effective at inhibiting the binding of the chemokine to the chemokine receptor.

The subject treated in the methods above is a mammal, preferably a  
15 human being, male or female, in whom modulation of chemokine receptor activity is desired. "Modulation" as used herein is intended to encompass antagonism, agonism, partial antagonism, inverse agonism and/or partial agonism. In a preferred aspect of the present invention, modulation refers to antagonism of chemokine receptor activity. The term "therapeutically effective amount" means the amount of the subject  
20 compound that will elicit the biological or medical response of a tissue, system, animal or human that is being sought by the researcher, veterinarian, medical doctor or other clinician.

The term "composition" as used herein is intended to encompass a product comprising the specified ingredients in the specified amounts, as well as any  
25 product which results, directly or indirectly, from combination of the specified ingredients in the specified amounts. By "pharmaceutically acceptable" it is meant the carrier, diluent or excipient must be compatible with the other ingredients of the formulation and not deleterious to the recipient thereof.

The terms "administration of" and or "administering a" compound  
30 should be understood to mean providing a compound of the invention to the individual in need of treatment.

Combined therapy to modulate chemokine receptor activity and thereby prevent and treat inflammatory and immunoregulatory disorders and diseases, including asthma and allergic diseases, as well as autoimmune pathologies such as  
35 rheumatoid arthritis and atherosclerosis, and those pathologies noted above is

illustrated by the combination of the compounds of this invention and other compounds which are known for such utilities.

For example, in the treatment or prevention of inflammation, the present compounds may be used in conjunction with an antiinflammatory or analgesic agent such as an opiate agonist, a lipoxxygenase inhibitor, such as an inhibitor of 5-lipoxxygenase, a cyclooxygenase inhibitor, such as a cyclooxygenase-2 inhibitor, an interleukin inhibitor, such as an interleukin-1 inhibitor, an NMDA antagonist, an inhibitor of nitric oxide or an inhibitor of the synthesis of nitric oxide, a non-steroidal antiinflammatory agent, or a cytokine-suppressing antiinflammatory agent, for example with a compound such as acetaminophen, aspirin, codiene, fentanyl, ibuprofen, indomethacin, ketorolac, morphine, naproxen, phenacetin, piroxicam, a steroidal analgesic, sufentanyl, sunlindac, tenidap, and the like. Similarly, the instant compounds may be administered with a pain reliever; a potentiator such as caffeine, an H<sub>2</sub>-antagonist, simethicone, aluminum or magnesium hydroxide; a decongestant such as phenylephrine, phenylpropanolamine, pseudophedrine, oxymetazoline, ephinephrine, naphazoline, xylometazoline, propylhexedrine, or levo-desoxyephedrine; an antiitussive such as codeine, hydrocodone, caramiphen, carbetapentane, or dexamethorphan; a diuretic; and a sedating or non-sedating antihistamine. Likewise, compounds of the present invention may be used in combination with other drugs that are used in the treatment/prevention/suppression or amelioration of the diseases or conditions for which compounds of the present invention are useful. Such other drugs may be administered, by a route and in an amount commonly used therefor, contemporaneously or sequentially with a compound of the present invention. When a compound of the present invention is used contemporaneously with one or more other drugs, a pharmaceutical composition containing such other drugs in addition to the compound of the present invention is preferred. Accordingly, the pharmaceutical compositions of the present invention include those that also contain one or more other active ingredients, in addition to a compound of the present invention. Examples of other active ingredients that may be combined with a compound of the present invention, either administered separately or in the same pharmaceutical compositions, include, but are not limited to: (a) VLA-4 antagonists such as those described in US 5,510,332, WO95/15973, WO96/01644, WO96/06108, WO96/20216, WO96/22966, WO96/31206, WO96/40781, WO97/03094, WO97/02289, WO 98/42656, WO98/53814, WO98/53817, WO98/53818, WO98/54207, and WO98/58902; (b) steroids such as beclomethasone,

methylprednisolone, betamethasone, prednisone, dexamethasone, and hydrocortisone;  
 (c) immunosuppressants such as cyclosporin, tacrolimus, rapamycin and other FK-506  
 type immunosuppressants; (d) antihistamines (H1-histamine antagonists) such as  
 bromopheniramine, chlorpheniramine, dexchlorpheniramine, triprolidine, clemastine,  
 5 diphenhydramine, diphenylpyraline, tripeleminamine, hydroxyzine, methdilazine,  
 promethazine, trimeprazine, azatadine, cyproheptadine, antazoline, pheniramine  
 pyrilamine, astemizole, terfenadine, loratadine, cetirizine, fexofenadine,  
 descarboethoxyloratadine, and the like; (e) non-steroidal anti-asthmatics such as  $\beta$ 2-  
 agonists (terbutaline, metaproterenol, fenoterol, isoetharine, albuterol, bitolterol, and  
 10 pirbuterol), theophylline, cromolyn sodium, atropine, ipratropium bromide,  
 leukotriene antagonists (zafirlukast, montelukast, pranlukast, iralukast, pobilukast,  
 SKB-106,203), leukotriene biosynthesis inhibitors (zileuton, BAY-1005); (f) non-  
 steroidal antiinflammatory agents (NSAIDs) such as propionic acid derivatives  
 (alminoprofen, benoxaprofen, bucloxic acid, carprofen, fenbufen, fenoprofen,  
 15 fluprofen, flurbiprofen, ibuprofen, indoprofen, ketoprofen, miroprofen, naproxen,  
 oxaprozin, pirprofen, pranoprofen, suprofen, tiaprofenic acid, and tioxaprofen), acetic  
 acid derivatives (indomethacin, acemetacin, alclofenac, clidanac, diclofenac,  
 fenclofenac, fenclozic acid, fentiazac, furofenac, ibufenac, isoxepac, oxpinac,  
 sulindac, tiopinac, tolmetin, zidometacin, and zomepirac), fenamic acid derivatives  
 20 (flufenamic acid, meclofenamic acid, mefenamic acid, niflumic acid and tolfenamic  
 acid), biphenylcarboxylic acid derivatives (diflunisal and flufenisal), oxicams  
 (isoxicam, piroxicam, sudoxicam and tenoxicam), salicylates (acetyl salicylic acid,  
 sulfasalazine) and the pyrazolones (apazone, bezpiperylon, feprazone, mofebutazone,  
 oxyphenbutazone, phenylbutazone); (g) cyclooxygenase-2 (COX-2) inhibitors; (h)  
 25 inhibitors of phosphodiesterase type IV (PDE-IV); (i) other antagonists of the  
 chemokine receptors, especially CXCR-4, CCR-1, CCR-2, CCR-3 and CCR-5; (j)  
 cholesterol lowering agents such as HMG-CoA reductase inhibitors (lovastatin,  
 simvastatin and pravastatin, fluvastatin, atorvastatin, and other statins), sequestrants  
 (cholestyramine and colestipol), nicotinic acid, fenofibric acid derivatives  
 30 (gemfibrozil, clofibrat, fenofibrate and benzaifibrate), and probucol; (k) anti-diabetic  
 agents such as insulin, sulfonylureas, biguanides (metformin),  $\alpha$ -glucosidase  
 inhibitors (acarbose) and glitazones (troglitazone and pioglitazone); (l) preparations of  
 interferon beta (interferon beta-1 $\alpha$ , interferon beta-1 $\beta$ ); (m) other compounds such as  
 5-aminosalicylic acid and prodrugs thereof, antimetabolites such as azathioprine and  
 35 6-mercaptopurine, and cytotoxic cancer chemotherapeutic agents. The weight ratio of

- the compound of the compound of the present invention to the second active ingredient may be varied and will depend upon the effective dose of each ingredient. Generally, an effective dose of each will be used. Thus, for example, when a compound of the present invention is combined with an NSAID the weight ratio of
- 5 the compound of the present invention to the NSAID will generally range from about 1000:1 to about 1:1000, preferably about 200:1 to about 1:200. Combinations of a compound of the present invention and other active ingredients will generally also be within the aforementioned range, but in each case, an effective dose of each active ingredient should be used.
- 10 The present invention is further directed to combinations of the present compounds with one or more agents useful in the prevention or treatment of AIDS. For example, the compounds of this invention may be effectively administered, whether at periods of pre-exposure and/or post-exposure, in combination with effective amounts of the AIDS antivirals, immunomodulators, anti-infectives, or
- 15 vaccines known to those of ordinary skill in the art.

#### ANTIVIRALS

<u>Drug Name</u>	<u>Manufacturer</u>	<u>Indication</u>
097	Hoechst/Bayer	HIV infection, AIDS, ARC (non-nucleoside reverse transcriptase inhibitor)
141 W94	Glaxo Wellcome	HIV infection, AIDS, ARC (protease inhibitor)

Soluble CD4 Protein and Derivatives	-	HIV infection
Testosterone	Alza, Smith Kline	AIDS-related wasting
Total Enteral Nutrition	Norwich Eaton Pharmaceuticals	diarrhea and malabsorption related to AIDS

It will be understood that the scope of combinations of the compounds of this invention with AIDS antivirals, immunomodulators, anti-infectives or vaccines is not limited to the list in the above Table, but includes in principle any combination with any pharmaceutical composition useful for the treatment of AIDS.

Preferred combinations are simultaneous or alternating treatments with a compound of the present invention and an inhibitor of HIV protease and/or a non-nucleoside inhibitor of HIV reverse transcriptase. An optional fourth component in the combination is a nucleoside inhibitor of HIV reverse transcriptase, such as AZT, 3TC, ddC or ddI. Preferred agents for combination therapy include: Zidovudine, Lamivudine, Stavudine, Efavirenz, Ritonavir, Nelfinavir, Abacavir, Indinavir, 141-W94 (4-amino-N-((2 syn,3S)-2-hydroxy-4-phenyl-3-((S)-tetrahydrofuran-3-yloxy-carbonylamino)-butyl)-N-isobutyl-benzenesulfonamide), N-(2(R)-hydroxy-1(S)-indanyl)-2(R)-phenylmethyl-4-(S)-hydroxy-5-(1-(4-(2-benzo[b]furanylmethyl)-2(S)-N'(t-butylcarbox-amido)-piperazinyl))-pentaneamide, and Delavirdine. A preferred inhibitor of HIV protease is indinavir, which is the sulfate salt of N-(2(R)-hydroxy-1(S)-indanyl)-2(R)-phenylmethyl-4-(S)-hydroxy-5-(1-(4-(3-pyridyl-methyl)-2(S)-N'(t-butylcarbo-xamido)-piperazinyl))-pentane-amide ethanolate, and is synthesized according to U.S. 5,413,999. Indinavir is generally administered at a dosage of 800 mg three times a day. Other preferred inhibitors of HIV protease include nelfinavir and ritonavir. Preferred non-nucleoside inhibitors of HIV reverse transcriptase include (-) 6-chloro-4(S)-cyclopropylethynyl-4(S)-trifluoromethyl-1,4-dihydro-2H-3,1-benzoxazin-2-one, which may be prepared by methods disclosed in EP 0,582,455. The preparation of ddC, ddI and AZT are also described in EPO 0,484,071. These

combinations may have unexpected effects on limiting the spread and degree of infection of HIV. Preferred combinations with the compounds of the present invention include the following: (1) Zidovudine and Lamivudine; (2) Stavudine and Lamivudine; (3) Efavirenz; (4) Ritoavir; (5) Nelfinavir; (6) Abacavir; (7) Indinavir; 5 (8) 141-W94; and (9) Delavirdine. Preferred combinations with the compounds of the present invention further include the following (1) indinavir, with efavirenz or (-) 6-chloro-4(S)-cyclopropylethynyl-4(S)-trifluoromethyl-1,4-dihydro-2H-3,1-benzoxazin-2-one, and, optionally, AZT and/or 3TC and/or ddI and/or ddC; (2) indinavir, and any of AZT and/or ddI and/or ddC.

10 Compound A in the foregoing Table is N-(2(R)-hydroxy-1(S)-indanyl)-2(R)-phenylmethyl-4(S)-hydroxy-5-(1-(4-(2-benzo[b]furanylmethyl)-2(S)-N'-(t-butylcarboxamido)-piperazinyl))pentaneamide, preferably administered as the sulfate salt. Compound A can be prepared as described in US 5646148.

In such combinations the compound of the present invention and other 15 active agents may be administered separately or in conjunction. In addition, the administration of one element may be prior to, concurrent to, or subsequent to the administration of other agent(s).

The compounds of the present invention may be administered by oral, parenteral (e.g., intramuscular, intraperitoneal, intravenous, ICV, intracisternal 20 injection or infusion, subcutaneous injection, or implant), by inhalation spray, nasal, vaginal, rectal, sublingual, or topical routes of administration and may be formulated, alone or together, in suitable dosage unit formulations containing conventional non-toxic pharmaceutically acceptable carriers, adjuvants and vehicles appropriate for each route of administration. In addition to the treatment of warm-blooded animals 25 such as mice, rats, horses, cattle, sheep, dogs, cats, monkeys, etc., the compounds of the invention are effective for use in humans.

The pharmaceutical compositions for the administration of the compounds of this invention may conveniently be presented in dosage unit form and may be prepared by any of the methods well known in the art of pharmacy. All 30 methods include the step of bringing the active ingredient into association with the carrier which constitutes one or more accessory ingredients. In general, the pharmaceutical compositions are prepared by uniformly and intimately bringing the active ingredient into association with a liquid carrier or a finely divided solid carrier or both, and then, if necessary, shaping the product into the desired formulation. In 35 the pharmaceutical composition the active object compound is included in an amount

sufficient to produce the desired effect upon the process or condition of diseases. As used herein, the term "composition" is intended to encompass a product comprising the specified ingredients in the specified amounts, as well as any product which results, directly or indirectly, from combination of the specified ingredients in the  
5 specified amounts.

The pharmaceutical compositions containing the active ingredient may be in a form suitable for oral use, for example, as tablets, troches, lozenges, aqueous or oily suspensions, dispersible powders or granules, emulsions, hard or soft capsules, or syrups or elixirs. Compositions intended for oral use may be prepared according to  
10 any method known to the art for the manufacture of pharmaceutical compositions and such compositions may contain one or more agents selected from the group consisting of sweetening agents, flavoring agents, coloring agents and preserving agents in order to provide pharmaceutically elegant and palatable preparations. Tablets contain the active ingredient in admixture with non-toxic pharmaceutically acceptable excipients  
15 which are suitable for the manufacture of tablets. These excipients may be for example, inert diluents, such as calcium carbonate, sodium carbonate, lactose, calcium phosphate or sodium phosphate; granulating and disintegrating agents, for example, corn starch, or alginic acid; binding agents, for example starch, gelatin or acacia, and lubricating agents, for example magnesium stearate, stearic acid or talc.  
20 The tablets may be uncoated or they may be coated by known techniques to delay disintegration and absorption in the gastrointestinal tract and thereby provide a sustained action over a longer period. For example, a time delay material such as glyceryl monostearate or glyceryl distearate may be employed. They may also be coated by the techniques described in the U.S. Patents 4,256,108; 4,166,452; and  
25 4,265,874 to form osmotic therapeutic tablets for control release.

Formulations for oral use may also be presented as hard gelatin capsules wherein the active ingredient is mixed with an inert solid diluent, for example, calcium carbonate, calcium phosphate or kaolin, or as soft gelatin capsules wherein the active ingredient is mixed with water or an oil medium, for example  
30 peanut oil, liquid paraffin, or olive oil.

Aqueous suspensions contain the active materials in admixture with excipients suitable for the manufacture of aqueous suspensions. Such excipients are suspending agents, for example sodium carboxymethylcellulose, methylcellulose, hydroxy- propylmethylcellulose, sodium alginate, polyvinyl-pyrrolidone, gum  
35 tragacanth and gum acacia; dispersing or wetting agents may be a naturally-occurring

phosphatide, for example lecithin, or condensation products of an alkylene oxide with fatty acids, for example polyoxyethylene stearate, or condensation products of ethylene oxide with long chain aliphatic alcohols, for example heptadecaethyleneoxycetanol, or condensation products of ethylene oxide with partial esters derived from fatty acids and a hexitol such as polyoxyethylene sorbitol monooleate, or condensation products of ethylene oxide with partial esters derived from fatty acids and hexitol anhydrides, for example polyethylene sorbitan monooleate. The aqueous suspensions may also contain one or more preservatives, for example ethyl, or n-propyl, p-hydroxybenzoate, one or more coloring agents, one or more flavoring agents, and one or more sweetening agents, such as sucrose or saccharin.

Oily suspensions may be formulated by suspending the active ingredient in a vegetable oil, for example arachis oil, olive oil, sesame oil or coconut oil, or in a mineral oil such as liquid paraffin. The oily suspensions may contain a thickening agent, for example beeswax, hard paraffin or cetyl alcohol. Sweetening agents such as those set forth above, and flavoring agents may be added to provide a palatable oral preparation. These compositions may be preserved by the addition of an anti-oxidant such as ascorbic acid.

Dispersible powders and granules suitable for preparation of an aqueous suspension by the addition of water provide the active ingredient in admixture with a dispersing or wetting agent, suspending agent and one or more preservatives. Suitable dispersing or wetting agents and suspending agents are exemplified by those already mentioned above. Additional excipients, for example sweetening, flavoring and coloring agents, may also be present.

The pharmaceutical compositions of the invention may also be in the form of oil-in-water emulsions. The oily phase may be a vegetable oil, for example olive oil or arachis oil, or a mineral oil, for example liquid paraffin or mixtures of these. Suitable emulsifying agents may be naturally- occurring gums, for example gum acacia or gum tragacanth, naturally-occurring phosphatides, for example soy bean, lecithin, and esters or partial esters derived from fatty acids and hexitol anhydrides, for example sorbitan monooleate, and condensation products of the said partial esters with ethylene oxide, for example polyoxyethylene sorbitan monooleate. The emulsions may also contain sweetening and flavoring agents.

Syrups and elixirs may be formulated with sweetening agents, for example glycerol, propylene glycol, sorbitol or sucrose. Such formulations may also contain a demulcent, a preservative and flavoring and coloring agents.

The pharmaceutical compositions may be in the form of a sterile  
5 injectable aqueous or oleagenous suspension. This suspension may be formulated according to the known art using those suitable dispersing or wetting agents and suspending agents which have been mentioned above. The sterile injectable preparation may also be a sterile injectable solution or suspension in a non-toxic parenterally-acceptable diluent or solvent, for example as a solution in 1,3-butane  
10 diol. Among the acceptable vehicles and solvents that may be employed are water, Ringer's solution and isotonic sodium chloride solution. In addition, sterile, fixed oils are conventionally employed as a solvent or suspending medium. For this purpose any bland fixed oil may be employed including synthetic mono- or diglycerides. In addition, fatty acids such as oleic acid find use in the preparation of injectables.

15 The compounds of the present invention may also be administered in the form of suppositories for rectal administration of the drug. These compositions can be prepared by mixing the drug with a suitable non-irritating excipient which is solid at ordinary temperatures but liquid at the rectal temperature and will therefore melt in the rectum to release the drug. Such materials are cocoa butter and  
20 polyethylene glycols.

For topical use, creams, ointments, jellies, solutions or suspensions, etc., containing the compounds of the present invention are employed. (For purposes of this application, topical application shall include mouthwashes and gargles.)

The pharmaceutical composition and method of the present invention  
25 may further comprise other therapeutically active compounds as noted herein which are usually applied in the treatment of the above mentioned pathological conditions.

In the treatment or prevention of conditions which require chemokine receptor modulation an appropriate dosage level will generally be about 0.01 to 500 mg per kg patient body weight per day which can be administered in single or  
30 multiple doses. Preferably, the dosage level will be about 0.1 to about 250 mg/kg per day; more preferably about 0.5 to about 100 mg/kg per day. A suitable dosage level may be about 0.01 to 250 mg/kg per day, about 0.05 to 100 mg/kg per day, or about 0.1 to 50 mg/kg per day. Within this range the dosage may be 0.05 to 0.5, 0.5 to 5 or 5 to 50 mg/kg per day. For oral administration, the compositions are preferably  
35 provided in the form of tablets containing 1.0 to 1000 milligrams of the active

ingredient, particularly 1.0, 5.0, 10.0, 15.0, 20.0, 25.0, 50.0, 75.0, 100.0, 150.0, 200.0, 250.0, 300.0, 400.0, 500.0, 600.0, 750.0, 800.0, 900.0, and 1000.0 milligrams of the active ingredient for the symptomatic adjustment of the dosage to the patient to be treated. The compounds may be administered on a regimen of 1 to 4 times per day, preferably once or twice per day.

It will be understood, however, that the specific dose level and frequency of dosage for any particular patient may be varied and will depend upon a variety of factors including the activity of the specific compound employed, the metabolic stability and length of action of that compound, the age, body weight, general health, sex, diet, mode and time of administration, rate of excretion, drug combination, the severity of the particular condition, and the host undergoing therapy.

Several methods for preparing the compounds of this invention are illustrated in the following Schemes and Examples. Starting materials are either commercially available, are made from known procedures or are prepared as illustrated.

#### SCHEME 1

The preparation of cinnamate esters such as 1-3 as intermediates that can be used for the synthesis of compounds within the scope of the instant invention is detailed in Scheme 1. Cinnamate esters of structure 1-3 can be obtained commercially or can be synthesized by reacting a suitable aromatic aldehyde 1-1 with a phosphonoacetate such as 1-2 in the presence of sodium hydride or other bases such as sodium, lithium or potassium hexamethyldisilazide, potassium t-butoxide, and the like. The aldehyde 1-1 can be obtained commercially or can be prepared in a variety of ways from commercial materials (see March J. "Advanced Organic Chemistry", 4th ed., John Wiley & Sons, New York, pp. 1270-1271 (1992)).

#### SCHEME 2

- A preparation of cyclopentane intermediates having a C-4 aryl substituent within the scope of the instant invention is detailed in Scheme 2 and can be used to prepare non-racemic cyclopentane derivatives when the resolution steps are done. Treatment of a *trans*-cinnamic ester such as 2-1 (see Scheme 1) with 2-((trimethylsilyl)methyl)-2-propen-1-yl acetate (2-2) in the presence of a catalytic amount of tetrakis(triphenylphosphine) palladium (0) and 1,2-bis(diphenylphosphino)ethane in THF at reflux afforded the exo-methylene cyclopentane 2-3. Hydrolysis of the ester can be done several ways, such as with aqueous sodium or lithium hydroxide in methanol or THF, to obtain the racemic acid 2-4. Resolution of the enantiomers can be accomplished by fractional crystallization from isopropanol, or other suitable solvents, of the salts with either (R)-(+)- or (S)-(-)- $\alpha$ -methylbenzyl amine to give the salts 2-5 and 2-6. The non-racemic acids 2-7 and 2-8 are recovered by acidification and extraction. Reesterification to non-racemic 2-9

and 2-10 can be done in a variety of ways, such as with trimethylsilyldiazomethane or acid catalyzed esterification in methanol.

# SCHEME 2A

5

An alternative preparation of non-racemic cyclopentane intermediates having a C-4 aryl substituent within the scope of the instant invention is detailed in Scheme 2A. Conversion of the cyclopentane acid 2-4 to the acid chloride 2-11 under  
5 standard conditions, such as with oxalyl chloride in methylene chloride with a catalytic amount of DMF, or to the mixed anhydride 2-12, prepared in situ with trimethylacetyl chloride in ether with TEA as base, followed by reaction with the performed lithium salt of (S)-(-)-4-benzyl-2-oxazolidinone 2-13, afforded the two non-racemic diastereomeric products 2-14 and 2-15, which are then separable by  
10 chromatography. Hydrolysis of each diastereomer under standard conditions, such as with lithium hydroxide and hydrogen peroxide or trimethylamine-N-oxide, affords the two non-racemic acids 2-7 and 2-8. Alternatively, in order to obtain an enhanced amount of the desired diastereomer 2-14 before separation, similar conversion of the starting *trans*-cinnamic acid 2-16 (Scheme 1) to the chiral *trans*-cinnamate 2-17  
15 followed by the ring formation reaction with 2-((trimethylsilyl)methyl)-2-propen-1-yl acetate (2-2) as detailed in Scheme 2 affords a 60 : 40 product mixture of 2-14 : 2-15.

### SCHEME 3

Preparation of some 1,3,4-trisubstituted cyclopentanes within the scope of the instant invention is given in Scheme 3. Reduction of ester 3-1 (either racemic or non-racemic) (Scheme 2), for example, with lithium borohydride, diisobutylaluminum hydride, lithium aluminum hydride, or sodium bis(2-methoxyethoxy)aluminum hydride in a suitable solvent, such as ether or THF, provides the primary alcohol 3-3. Alternatively, reduction of the acid 3-2 (either racemic or non-racemic) (Scheme 2 or 2A), for example with lithium aluminum hydride in THF, will also afford the alcohol 3-3. In cases where the Ar moiety is not amenable to salt resolution as detailed in Scheme 3, an alternative resolution can often be achieved using chiral HPLC methods to separate the enantiomers 3-3. Oxidation of 3-3 to the aldehyde 3-4 can be carried out under numerous conditions, such as with DMSO and oxalyl chloride at low temperature, followed by triethylamine (Swern oxidation), with the Dess-Martin periodinane, with *N*-methylmorpholine in the presence of a catalytic amount of TPAP, or with various chromium trioxide-based reagents (see March J. "Advanced Organic Chemistry", 4th ed., John Wiley & Sons, New York, pp. 1167-1171 (1992)). Reductive alkylation of a cyclic amine, such as piperidine 3-5 (see Schemes 12 and 13), using for example sodium triacetoxyborohydride or sodium cyanoborohydride in a suitable solvent such as methylene chloride, 1,2-dichloroethane, THF, acetonitrile or methanol, with 3-4 then provides a 3-(4-(substituted-piperidin-1-yl)methyl)cyclopentane derivative 3-6. In the cases where the R group of the piperidine is stable to ozone, ozonolysis of the exo-methylene followed by a reductive work-up with dimethyl sulfide affords the ketone 3-7. Alternatively, 3-7 can be obtained from 3-6 through a stepwise oxidation using catalytic osmium tetroxide in the presence of *N*-methylmorpholine-*N*-oxide followed by sodium periodate cleavage of the intermediate diol. A second reductive alkylation of a D- and/or L-amino-acid ester, such as the methyl, ethyl, *t*-butyl, benzyl or 4-methoxybenzyl ester of glycine ( $R'' = H$ ), alanine ( $R'' = Me$ ), valine ( $R'' = iso-Pr$ ), leucine ( $R'' = iso-Bu$ ), isoleucine ( $R' = sec-Bu$ ), cyclopropylalanine ( $R'' = CH_2cycPr$ ), cyclobutylalanine ( $R'' = CH_2cycBu$ ), cyclohexylglycine ( $R'' = cycHex$ ) or a *N*-alkyl amino-acid, such as *N*-methyl glycine ( $R' = Me$ ), or a cyclic amino-acid, such as proline ( $R'R'' = -(CH_2)_3-$ ), with 3-7 as described above with sodium triacetoxyborohydride or sodium cyanoborohydride affords 3-8. Final deprotection of the ester under conditions to which the R group is stable, such as HCl in ether, TFA or formic acid for *t*-butyl and 4-methoxybenzyl esters, hydrogenation for benzyl esters or standard hydrolysis for alkyl or benzyl esters, affords the final product(s) 3-9 which

are within the scope of the instant invention and which can be chemokine receptor modulators or which can be further modified as shown below in Scheme 14. The two individual C-1 isomers (four diastereomers when either the cyclopentyl scaffold or the amino-acid are racemic) can be separated by flash chromatography, Prep TLC or

5 HPLC methods as either the penultimate esters 3-8 and/or the final compounds 3-9.

#### SCHEME 4

10

An alternative route for the preparation of some 1,3,4-trisubstituted cyclopentanes within the scope of the instant invention is given in Scheme 4. In the cases where the R group of the piperidine in Scheme 3 is not stable to ozone or the osmium tetroxide/sodium periodate oxidation sequence, oxidation of the exo-

15 methylene can be done prior to the reductive alkylation of the piperidine. Thus, ozonolysis of the alcohol 4-1 (Scheme 3) followed by a reductive work-up with dimethyl sulfide affords the ketone-alcohol 4-2. Oxidation to the ketone-aldehyde 4-3 can be done as described for Scheme 3 with *N*-methylmorpholine/TPAP or under Swern conditions. Selective reductive alkylation of the 4-substituted piperidine 4-4

20 (see Schemes 12 and 13) with the aldehyde of 4-3, using for example sodium triacetoxyborohydride or sodium cyanoborohydride in a suitable solvent such as methylene chloride, 1,2-dichloroethane, THF, acetonitrile or methanol, then provides

the 3-(4-(substituted-piperidin-1-yl)methyl)cyclopentane derivative 4-5 (same as 3-7). This can then be converted to the final product(s) 4-6 as described in Scheme 3.

# SCHEME 5

5

An alternative route for the preparation of some 1,3,4-trisubstituted cyclopentanes within the scope of the instant invention is given in Scheme 5.

10 Reductive alkylation with ketone alcohol 5-1 (Scheme 4) of a variety of amino-acid

esters (See Scheme 3) affords the alcohols 5-2 and 5-3, of which 5-2 is the major product (lower  $R_f$  when  $R''$  is (S), higher  $R_f$  when  $R''$  is (R)) and 5-3 is the minor product (higher  $R_f$  when  $R''$  is (S), lower  $R_f$  when  $R''$  is (R)). Separation of the individual diastereomers (2 when both reactants are non-racemic, 4 when only one is non-racemic) can be done at this intermediate or at a later step. Oxidation of 5-2 and/or 5-3 to the aldehyde(s) 5-4 can be done as described in Scheme 3, preferably now with *N*-methylmorpholine/TPAP due to the presence of the secondary N-H. Reductive alkylation of a 4-substituted piperidine 5-5 (see Schemes 12 to 30) with the aldehyde of 5-4, using for example sodium triacetoxyborohydride or sodium cyanoborohydride in a suitable solvent such as methylene chloride, 1,2-dichloroethane, THF, acetonitrile or methanol, then provides the 3-(4-(substituted-piperidin-1-yl)methyl)cyclopentane derivative 5-6. The intermediate ester(s) 5-6 can then be converted to the final product(s) 5-7 as described in Scheme 3.

15

SCHEME 5A

An alternative preparation of the intermediates 5-2 and 5-3 in Scheme 5 which reverses the C-1 isomeric selectivity is shown in Scheme 5A. Silylation of the alcohol moiety of 5-1 (Scheme 4) gives the silyl ether 5-10. Alternatively, silylation of the alcohol 5-8 (Scheme 3) gives 5-9 which on ozonolysis can also afford the silyl ether 5-10. Reductive alkylation of the aforementioned amino-acid esters now using the silyl ether 5-10 affords the products 5-11 and 5-12 in an essentially opposite ratio as is obtained in Scheme 5 for 5-2 and 5-3. TBAF desilylation then

affords primarily 5-3. Thus, the preferred C-1 orientation can be selected for depending on the requirements of the desired final compounds.

5

SCHEME 6

An alternative route for the preparation of some 1,3,4-trisubstituted cyclopentanes within the scope of the instant invention is given in Scheme 6.

- 5 Reductive alkylation of benzylamine with ketone-alcohol 6-1 (Scheme 4, either racemic or non-racemic), using for example sodium triacetoxyborohydride or sodium cyanoborohydride, gives 6-2 which can be hydrogenated under standard conditions in methanol in the presence of a palladium catalyst, for example Pd/C or Pearlman's catalyst and using either hydrogen under pressure or ammonium formate at reflux, to
- 10 afford the primary amine 6-3. Reaction of the amine with CBZ chloride or BOC anhydride gives the amine protected carbamates 6-4 and 6-5 as a mixture of C-1 isomers which can be separated. Oxidation to the aldehydes 6-6 and 6-7 is carried out under Swern conditions or with *N*-methylmorpholine/TPAP. The relative stereochemistry of the C-1 to the C-3 and C-4 substituents was determined by NMR
- 15 Noe experiments on either the alcohols 6-4 and 6-5 or the aldehydes 6-6 and 6-7. Reductive alkylation of a 4-substituted piperidine 6-8 with the individual aldehydes 6-6 and 6-7 using for example sodium triacetoxyborohydride or sodium cyanoborohydride in a suitable solvent such as methylene chloride, 1,2-dichloroethane, THF, acetonitrile or methanol, then provides each of the C-1 amino-
- 20 protected isomeric 3-(4-(substituted-piperidin-1-yl)methyl)cyclopentane derivatives 6-9 and 6-10. Deprotection of the C-1 amino with either TFA (for  $R_1$  = *t*-butyl) or

standard hydrogenation (for  $R_1 = \text{Bn}$ ) depending on the stability of the piperidine R group affords the amines 6-11 and 6-12. These amines can then be individually reductively alkylated as above with 2-oxo-acetic acids, such as 2-oxovaleric ( $R'' = n\text{-Pr}$ ), 4-methyl-2-oxovaleric ( $R'' = \text{iso-Bu}$ ), 2-oxophenylacetic ( $R'' = \text{Ph}$ ), to afford the  
5 final compounds 6-13 and 6-14 and 6-15 and 6-16 as mixtures of the  $R''$  isomers. In the case of  $R'' = \text{iso-Bu}$  and non-racemic cyclopentyl scaffold, comparison of the HPLC of these products with those obtained in Scheme 5A allowed the stereochemical assignments of all the final products and intermediates.

10

SCHEME 7

- An alternative route for the preparation of some 1,3,4-trisubstituted  
 5 cyclopentanes within the scope of the instant invention is given in Scheme 7.  
 Reductive alkylation, using for example sodium triacetoxyborohydride or sodium

5 cyanoborohydride, of an alkyl amine with the ketone 7-1 (Schemes 3 or 4) gives 7-2 as a mixture of C-1 isomers which may be separated. Alternatively, carbamate 7-3 (see Scheme 6) can be alkylated with an alkyl or allyl halide, such as 1-bromo-2-methylprop-2-ene, and a strong base, such as sodium hydride in DMF, followed by  
10 hydrogenation under standard conditions to reduce the allyl. When R<sub>1</sub> is Bn, removal the CBZ can occur simultaneously to give the same amine intermediate 7-2. When R<sub>1</sub> is t-butyl, a subsequent reaction with TFA is required to give 7-2. Alkylation of the amine with t-butyl or benzyl bromoacetate affords 7-4 which can be converted to the desired final compounds 7-5 as described in Scheme 3.

10

SCHEME 8

- 5 An alternative route for the preparation of some 1,3,4-trisubstituted cyclopentanes within the scope of the instant invention is given in Scheme 8. Reductive alkylation, using for example sodium triacetoxyborohydride or sodium cyanoborohydride, of glycine t-butyl, benzyl or PMB ester with the ketone-alcohol 8-1 (Scheme 4) gives 8-2 as a mixture of C-1 isomers. A second reductive alkylation with

a ketone or aldehyde affords the N-alkyl glycine derivatives 8-3 and 8-4 which can be separated chromatographically either before and/or after the second alkylation. Also, the order of the steps can be reversed such that reductive alkylation of an amine with 8-1 first to give 8-5, followed by alkylation with an alkyl or benzyl bromoacetate as in  
5 Scheme 7, affords 8-3 and 8-4. These reactions generally give 8-3 as the predominate product. Individual oxidation of the alcohols 8-3 and 8-4 can be done either under Swern conditions or using the *N*-methylmorpholine/TPAP method to give the aldehydes followed by a second or third reductive alkylation of a 4-substituted piperidine 8-6, using for example sodium triacetoxyborohydride or sodium  
10 cyanoborohydride in a suitable solvent such as methylene chloride, 1,2-dichloroethane, THF, acetonitrile or methanol, which then provides the 3-(4-(substituted-piperidin-1-yl)methyl)cyclopentane derivative 8-7. This intermediate can then be converted to the final products 8-8 as described in Scheme 3.

15

SCHEME 8A

An alternative preparation of the intermediates 8-3 and 8-4 in Scheme 8 which again reverses the C-1 isomeric selectivity is shown in Scheme 8A.

Silylation of the alcohol moiety of 8-1 (Scheme 4) gives the silyl ether 8-9.

- 5 Alternatively, silylation of the alcohol 8-10 (Scheme 3) gives 8-11, which on ozonolysis can also afford the silyl ether 8-9. Reductive alkylation now using the silyl ether 8-9 gives 8-12 and 8-13 followed by the second reductive alkylation with an aldehyde or ketone affords the products 8-14 and 8-15 in an essentially opposite ratio as is obtained in Scheme 8 for 8-3 and 8-4. TBAF desilylation then affords primarily
- 10 8-4. Separation of the C-1 isomers can usually be achieved at one or more of the intermediate steps. Thus, the preferred C-1 orientation can be selected for depending on the requirements of the desired final compounds.

#### SCHEME 9

15

- 5                      Several other alternative routes for the preparation of some 1,3,4-trisubstituted cyclopentanes within the scope of the instant invention are given in Scheme 9. Reductive alkylation, using for example sodium triacetoxyborohydride or sodium cyanoborohydride, of an amino-acid ester having dialkyl substitution with the ketone-alcohol 9-1 (Scheme 4) gives 9-2 as a mixture of C-1 isomers which may be separated and carried on to the final product(s) 9-3 individually or as a mixture as detailed in Scheme 5. Alternatively, a second reductive alkylation of 9-2 as in Scheme 8 affords 9-4 which may be separable or used as a mixture to give final product(s) 9-5. Also, more extended amino-acid esters, such as a  $\beta$ -alanine ester (9-6,  $n = 1$ ) or 4-aminobutyrate (9-6,  $n = 2$ ), which may also be substituted on the chain or
- 10

on N, can be employed to give 9-7. These intermediates can then be converted to final product(s) 9-8 as described in Scheme 5 and/or 8.

### SCHEME 10

5

An alternative route for the preparation of some 1,3,4-trisubstituted cyclopentanes within the scope of the instant invention is given in Scheme 10.

- 10 Reductive alkylation, using for example sodium triacetoxymethylborohydride or sodium cyanoborohydride, of a cyclic secondary amino-acid 10-1, such as D- or L-proline t-butyl ester ( $n = 0$ ),  $\beta$ -proline t-butyl ester ( $n = 0$ ), 2-, 3-, and 4-t-butylcarboxypiperidine ( $n = 1$ ), with the ketone-alcohol 10-2 (Scheme 4) gives 10-3 and 10-4 as a mixture of C-1 isomers which may be separated. These intermediates
- 15 can then be converted to the final product(s) as described in Scheme 5.

### SCHEME 11

- An alternative route for the preparation of some 1,3,4-trisubstituted cyclopentanes within the scope of the instant invention is given in Scheme 11.
- 5 Reductive alkylation, using for example sodium triacetoxyborohydride or sodium cyanoborohydride, of a cycloalkyl amino-acid 11-1, such as 1-aminocyclopentane carboxylic acid t-butyl ester (X = single bond) or a heterocyclic amino-acid, such as 4-aminomorpholin-2-yl carboxylic acid t-butyl ester (X = O) with the ketone-alcohol 11-2 (Scheme 4) gives a mixture of C-1 isomers which may be separated to give, for example, 11-3. These intermediates can then be converted to the final product(s) such as 11-4 as described in Scheme 5.
- 10

#### SCHEME 12

Synthetic routes for the preparation of piperidines bearing a 4-substituent containing an amide, carbamate, urea or sulfonamide functional group are given in Scheme 12. Reductive alkylation of commercially available 12-1 or 12-2 with primary amine 12-3 in the presence of sodium triacetoxyborohydride or sodium cyanoborohydride in a suitable solvent (for example, methylene chloride, 1,2-dichloroethane, THF, acetonitrile, or methanol) provides amines 12-4 or 12-5. Acylation is then carried out with an acyl chloride (or a carboxylic acid plus an activating agent, such as EDC, DCC, or BOP-Cl) to provide 12-6 or 12-7 as an amide. Alternatively, acylation with a chloroformate provides 12-6 or 12-7 as a carbamate. Treatment of 12-4 or 12-5 with an isocyanate affords 12-6 or 12-7 as a urea. Treatment of 12-4 or 12-5 with a sulfonyl chloride affords 12-6 or 12-7 as a sulfonamide. For each of these reactions, an amine base is employed, such as triethylamine, DIEA, pyridine, or 2,6-lutidine. In the case of the benzyl-protected derivative 12-7, hydrogenolysis under standard conditions (for example, hydrogen in the presence of palladium on carbon in methanol or ethanol) provided desired intermediate 12-8. For the N-Boc compound 12-6, exposure to suitable anhydrous acidic conditions (for example, trifluoroacetic acid and anisole in methylene chloride at temperatures from 0-25 degrees C or HCl in methanol at 0-25 degrees C) affords the salt of 12-8. This compound is then utilized as the cyclic secondary amine component as shown above in Schemes 3, 4, 5, 6, 8, 9, 10 and 11. Alternatively, if no functionality are present in the alkyl cyclopentane framework that would be adversely effected by the above mentioned chemistry, then 4-piperidone may be attached directly to the alkyl cyclopentane framework described above, and the chemistry described in this paragraph can be carried out equating the alkyl cyclopentane segment to the group P' given in Scheme 12, structures 1 through 7.

## SCHEME 13

- 5 Alternate synthetic routes for the preparation of piperidines bearing a 4-substituent containing an amide, carbamate, urea or sulfonamide functional group are given in Scheme 13. Protection of 4-bromopiperidine can be carried out with several protecting groups for nitrogen. For example, using standard conditions, protection with a Boc group gives 13-2, whereas reductive alkylation with

- benzaldehyde yields the N-benzyl derivative 13-3. Displacement of the bromide with sodium azide in warm to hot DMF provides the 4-azidopiperidine derivative, and reduction of the azide with hydrogen in the presence of a palladium catalyst (for the Boc protected intermediate) or with triphenylphosphine followed by hydrolysis (for N-benzyl protected intermediate) provides the aminopiperidine 13-4 or 13-5.
- 5 Acylation is then carried out with an acyl chloride (or a carboxylic acid plus an activating agent, such as EDC, DCC, or BOP-Cl) to provide 13-6 or 13-7 as an amide. Alternatively, acylation with a chloroformate provides 13-6 or 13-7 as a carbamate. Treatment of 13-4 or 13-5 with an isocyanate affords 13-6 or 13-7 as a urea.
- 10 Treatment of 13-4 or 13-5 with a sulfonyl chloride affords 13-6 or 13-7 as a sulfonamide. For each of these reactions, an amine base is employed, such as triethylamine, DIEA, pyridine, or 2,6-lutidine. When  $X = C(R_3)HCO$ ,  $OCO$ , or  $SO_2$  compounds 13-6 and 13-7 may optionally be alkylated by treatment with a base such as sodium hydride, potassium hydride, LiHMDS, KHMDS, or NaHMDS followed by
- 15 treatment with an alkyl iodide, allyl halide, or propargyl halide. Solvents such as DMF, DMSO, N-methylpyrrolidine or THF are suitable. These procedures provide carbamate, urea, amide or sulfonamide 13-8 and 13-9. Removal of the protecting groups is then carried out as shown in Scheme 12 above, and the resulting 1-unsubstituted piperidines are then utilized as noted in the descriptions for Schemes 3,
- 20 4, 5, 6, 8, 9, 10 and 11.

In some cases the order of carrying out the foregoing reaction schemes may be varied to facilitate the reaction or to avoid unwanted reaction products. The following examples are provided for the purpose of further illustration only and are

25 not intended to be limitations on the disclosed invention.

#### GENERAL

Concentration of solutions was carried out on a rotary evaporator under reduced

30 pressure. Flash chromatography was carried out on silica gel (230-400 mesh). NMR spectra were obtained in  $CDCl_3$  solution unless otherwise noted. Coupling constants (J) are in hertz (Hz). Abbreviations: diethyl ether (ether), triethylamine (TEA), N,N-diisopropylethylamine (DIEA) saturated aqueous (sat'd), room temperature (rt), hour(s) (h), minute(s) (min).

35

## HPLC CONDITIONS

HPLC A. Retention time using the following conditions: Column: YMC ODS A, 5  $\mu$ , 4.6 x 50 mm; Gradient Eluant: 10:90 to 90:10 v/v CH<sub>3</sub>CN/H<sub>2</sub>O + 0.5% TFA over 4.5 min, hold 30 sec; Detection: PDA, 210-400 nm; Flow Rate: 2.5 mL/min.

HPLC B. Retention time using the following conditions: Column: Analytical Sales & Services Advantage HL C18 5  $\mu$  4.6 x 100 mm column; Gradient Eluant: 10:90 to 90:10 v/v CH<sub>3</sub>CN/H<sub>2</sub>O + 0.5% TFA over 10 min, hold 2 min; Detection: PDA, 200-400 nm; Flow Rate: 2.25 mL/min.

The following are representative Procedures for the preparation of the piperidines used in the following Examples or which can be substituted for the piperidines used in the following Examples which may not be commercially available.

## PROCEDURE 1

4-(*N*-(*t*-Butoxycarbonyl)-*N*-(ethyl)amino)piperidine

Step A: (1-Benzyloxycarbonylpiperidin-4-yl)isocyanate

To a solution of 9.72 g (34.8 mmol) of 1-benzyloxycarbonyl-4-carboxypiperidine in 100 mL of methylene chloride was added 2 drops of DMF and then slowly 3.34 mL (38.3 mmol) of oxalyl chloride. The reaction was stirred at rt for 1 h (gas evolution had stopped) and the volatiles were removed *in vacuo* followed by evaporation of a portion of toluene.

The above residue was taken up in 100 mL of acetone and slowly added to a solution of 5.66 g (87 mmol) of sodium azide in 25 mL of water and 25 mL of acetone while stirred in an ice bath. The reaction was stirred at 0 °C for 1.5 h and then diluted with ice water and extracted twice with 2x 150 mL of toluene. The organic layers were each washed with a portion of brine, dried over sodium sulfate, combined and concentrated to about 100 mL *in vacuo* with a minimum of heating. The remaining solution was slowly heated to 85 °C for 1.5 h and then concentrated to dryness *in vacuo* to afford about 9.5 g of crude title product which can be used directly in subsequent reactions.

Step B: 1-Benzoyloxycarbonyl-4-(t-butoxycarbonylamino)piperidine

A solution of 3.2 g (12.3 mmol) of (1-benzyloxycarbonylpiperidin-4-yl)isocyanate from Step A in 25 mL of DMF was slowly added to a suspension of CuCl<sub>3</sub> in 25 mL of DMF and 12 mL of t-butanol. The reaction was stirred for 24 h and then diluted with water and extracted twice with 1:1 ether : ethyl acetate. The organic layers were each washed with a portion of water and brine, dried over sodium sulfate, combined and concentrated. The residue was purified by FC eluting with 20% ethyl acetate in hexanes to afford 685 mg of title compound.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>): δ 1.26 (m, 2 H), 1.42 (s, 9 H), 1.90 (br d, J = 12, 2 H), 2.90 (br t, 2 H), 3.58 (m, 1 H), 4.08 (m, 2 H), 4.42 (br s, 1 H), 5.09 (s, 2 H), 7.33 (m, 5 H).

Step C: 1-Benzoyloxycarbonyl-4-(N-(t-butoxycarbonyl-N-(ethyl)amino)piperidine

To a solution of 476 mg (1.42 mmol) of 1-benzyloxycarbonyl-4-(t-butoxycarbonylamino)piperidine from Step B and 0.24 mL (2.8 mmol) of ethyl iodide in 10 mL of DMF was added 85 mg (2.1 mmol) of 60% sodium hydride in mineral oil. The reaction was stirred for 16 h and was then poured into water and extracted three times with ether. The organic layers were each washed with a portion of water and brine, dried over sodium sulfate, combined and concentrated. The residue was purified by FC eluting with 15% ethyl acetate in hexanes to afford 409 mg of title compound.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>): δ 1.06 (t, J = 7, 3 H), 1.44 (s, 9 H), 1.5-1.7 (2 m, 4 H), 2.78 (m, 2 H), 3.1 (m, 2 H), 4.10 (m, 1 H), 4.25 (m, 2 H), 5.10 (s, 2 H), 7.33 (m, 5 H).

Step D: 4-(N-(t-Butoxycarbonyl)-N-(ethyl)amino)piperidine

A solution of 400 mg (1.1 mmol) of 1-benzyloxycarbonyl-4-(N-(t-butoxycarbonyl-N-(ethyl)amino)piperidine from Step C in 4 mL of methanol was hydrogenated with 40 mg of 10% Pd/C under a hydrogen balloon for 16 h. The reaction was filtered and concentrated *in vacuo* to give the title compound which was used directly in the next step.

## PROCEDURE 2

4-(*N*-Methoxycarbonyl-*N*-(ethyl)amino)piperidine

## Step A: 1-Benzyloxycarbonyl-4-(methoxycarbonylamino)piperidine

5 To a solution of 1.0 g (3.9 mmol) of (1-benzyloxycarbonylpiperidin-4-yl)isocyanate from Procedure 1, Step A in 10 mL of methanol was added 5 mg (cat) of DMAP. The reaction was stirred under nitrogen at rt for 24 h and then poured into water containing 2 mL of 2 N hydrochloric acid and was extracted twice with ethyl acetate. The organic layers were each washed with a portion of brine, dried over  
10 sodium sulfate, combined and concentrated to give 1.4 g of the crude title compound which can be used directly in subsequent reactions.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>): δ 1.32 (m, 2 H), 1.92 (br d, J = 10, 4 H), 2.91 (v br t, 2 H), 3.66 (br s, 3 H), 4.10 (m, 1 H), 4.58 (br s, 1 H), 5.09 (s, 2 H), 7.33 (m, 5 H).

15

Step B: 1-Benzyloxycarbonyl-4-(*N*-methoxycarbonyl(*N*-ethyl)amino)piperidine

To 82 mg (0.28 mmol) of 1-benzyloxycarbonyl-4-(methoxycarbonylamino)piperidine from Step A and 0.045 mL (0.56 mmol) of ethyl iodide in 4 mL of DMF under nitrogen was added 22 mg (0.56 mmol) of 60% sodium hydride in mineral oil. The reaction was stirred at rt for 1 h and was then poured into water containing 1 mL of 2 N hydrochloric acid and extracted twice with ether. The organic layers were each washed with a portion of brine, dried over sodium sulfate,  
20 combined and concentrated. The residue was purified by FC eluting with 50% ethyl acetate in hexanes to afford 87 mg of title compound.

25

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>): δ 1.07 (t, J = 7, 3 H), 1.5-1.8 (m, 4 H), 2.79 (m, 2 H), 3.15 (m, 2 H), 3.68 (s, 3 H), 4.10 (m, 1 H), 4.26 (m, 2 H), 5.10 (s, 2 H), 7.34 (m, 5 H).

30 Step C: 4-(*N*-Methoxycarbonyl-*N*-(ethyl)amino)piperidine

Using essentially the same procedure as in Procedure 1, Step D, 85 mg (0.27 mmol) of 1-benzyloxycarbonyl-4-(*N*-(methoxycarbonyl)-*N*-(ethyl)amino)piperidine from Step B was hydrogenated to afford 37 mg of the title compound.

## PROCEDURE 3

## 4-(Dimethylaminocarbonylamino)piperidine

5    Step A:        1-Benzyloxycarbonyl-4-(dimethylaminocarbonylamino)piperidine

To 0.83 g (3.2 mmol) of (1-benzyloxycarbonylpiperidin-4-yl)isocyanate from Procedure 1, Step A in 10 mL was added 16 mL (32 mmol) of 2 M dimethylamine in THF. The reaction was stirred under nitrogen at rt for 24 h and then poured into water containing 20 mL of 2 N hydrochloric acid and was extracted twice with ethyl acetate. The organic layers were each washed with a portion of brine, dried over sodium sulfate, combined and concentrated to give 0.95 g of the crude title compound which can be used directly in subsequent reactions.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>): δ 1.25 (m, 2 H), 1.95 (br d, J = 10, 2 H), 2.86 (br s, 6 H + 2 H), 3.79 (m, 1 H), 4.0-4.25 (m, 3 H), 5.09 (s, 2 H), 7.35 (m, 5 H).

15    Step B:        4-(Dimethylaminocarbonylamino)piperidine

Using essentially the same procedure as in Procedure 1, Step D, 1.4 g (4.6 mmol) of 1-benzyloxycarbonyl-4-(dimethylaminocarbonylamino)piperidine from Step A was hydrogenated to afford 690 mg of the title compound.

## PROCEDURE 4

4-(*N*-(Benzyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine25    Step A:        4-Azido-1-*t*-butoxycarbonylpiperidine

To a solution of 45.3 g (172 mmol) of 4-bromo-1-*t*-butoxycarbonylpiperidine in 750 mL of DMF was added 22.3 g (343 mmol) of sodium azide and 2.5 g (17 mmol) of sodium iodide. The reaction was stirred at rt for 24 h and then at 60 °C for 4 h. The mixture was poured into water containing 20 mL of sodium bicarbonate and extracted twice with 1:1 ether:hexanes. The organic layers were each washed with a portion of water and brine, dried over sodium sulfate, combined and concentrated. The residue was purified by FC eluting with 5 - 10% ethyl acetate in hexanes to afford 39 g of title compound having a trace of elimination byproduct.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>): δ 1.43 (s, 9 H), 1.52 (m, 2 H), 1.85 (m, 2 H), 3.07 (m, 2 H), 3.55 (m, 1 H), 3.78 (m, 2 H).

5    Step B:            4-Amino-1-t-butoxycarbonylpiperidine

                         A solution of 4.05 g (17.9 mmol) of 4-azido-1-t-butoxycarbonylpiperidine from Step A in 50 mL of methanol was hydrogenated with 350 mg of 10% Pd/C under a hydrogen balloon for 16 h when the reaction was complete by TLC (10% ethyl acetate in hexanes). The catalyst was filtered off and the  
10    volatiles removed *in vacuo* to give 3.5 g of title compound which was used directly in subsequent reactions.

Step C:            4-Benzyloxycarbonylamino-1-t-butoxycarbonylpiperidine

                         To a solution of 1.2 g (6.0 mmol) 4-amino-1-t-butoxycarbonylpiperidine from Step B in 40 mL of methylene chloride was added  
15    3.15 mL (18 mmol) of DIPEA and 1.03 mL (7.2 mmol) of benzyl chloroformate while cooled in an ice bath. After 0.5 h the reaction was quenched with aqueous sodium carbonate and extracted three times with methylene chloride. The organic layers were each washed with a portion of brine, dried over sodium sulfate, combined and  
20    concentrated. The residue was purified by FC eluting with 25% ethyl acetate in hexanes to afford 1.94 g of title compound.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>): δ 1.26 (m, 2 H), 1.42 (s, 9 H), 1.90 (br d, J = 12, 2 H), 2.90 (br t, 2 H), 3.58 (m, 1 H), 4.08 (m, 2H), 4.42 (br s, 1 H), 5.09 (s, 2 H), 7.33 (m, 5  
25    H).

Step D:            4-(N-(Benzyloxycarbonyl)-N-((prop-1-yl)amino)-1-t-butoxycarbonylpiperidine

                         To 110 mg (0.32 mmol) 4-benzyloxycarbonylamino-1-t-butoxycarbonylpiperidine from Step C and 0.16 mL (1.6 mmol) of n-propyl iodide in  
30    2 mL of DMF under nitrogen was added 26 mg (0.65 mmol) of 60% sodium hydride in mineral oil. The reaction was stirred at rt for 16 h and was then poured into water and extracted twice with ether. The organic layers were each washed with a portion of brine, dried over sodium sulfate, combined and concentrated. The residue was

purified by FC eluting with 20% ethyl acetate in hexanes to afford 90 mg of title compound.

Step E: 4-(*N*-(Benzyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine  
hydrochloride salt

To a solution of 2.4 mmol of HCl in 2 mL of methanol (prepared by the addition of 0.17 mL of acetyl chloride at 0 °C and stirring for 10 min) was added 90 mg of 4-(*N*-(benzyloxycarbonyl)-*N*-(prop-1-yl)amino)-1-*t*-butoxycarbonylpiperidine. The mixture was stirred at rt for 16 h at which time the reaction was complete by TLC (20% ethyl acetate in hexanes) and was evaporated to dryness *in vacuo* to afford 75 mg of the title compound as the hydrochloride salt.

#### PROCEDURE 5

4-(*N*-(Benzyloxycarbonyl)-*N*-(allyl)amino)piperidine hydrochloride

Step A: 4-(*N*-(Benzyloxycarbonyl)-*N*-(allyl)amino)-1-*t*-butoxycarbonylpiperidine

Sodium hydride (47 mg of 60% oil dispersion, 1.2 mmol) was added to a solution of 4-(benzyloxycarbonylamino)-1-(*t*-butoxycarbonyl)piperidine (200 mg, 0.598 mmol) from Procedure 4, Step C and allyl bromide (0.251 mL, 351 mg, 2.9 mmol) in 2.0 mL of DMF, and the reaction was stirred overnight at rt. The reaction mixture was poured into 20 mL of water and extracted with 3 x 20 mL of ethyl ether. The combined organic layers were washed with 30 mL of brine, dried over sodium sulfate, and evaporated. The crude product was purified by flash column chromatography on silica gel, eluting with 20% ethyl acetate in hexane, to give 246 mg of the title compound as a viscous oil.

Mass spectrum (ESI):  $m/z$  = 275 (M-99, 100%).

Step B: 4-(*N*-(Benzyloxycarbonyl)-*N*-(allyl)amino)piperidine hydrochloride  
Acetyl chloride (0.467 mL, 516 mg, 6.57 mmol) was added to 2.0 mL of methanol at 0 °C and the mixture was stirred for 10 min to give a solution of HCl. 4-(*N*-(Benzyloxycarbonyl)allylamino)-1-(*t*-butoxycarbonyl)piperidine

from Step A (123 mg, 0.33 mmol) was then added and the resulting solution was stirred for 1 h at 0 °C and 1 h at rt. The solution was evaporated to give the title compound as a crystalline solid in quantitative yield.

5 <sup>1</sup>H NMR (400 MHz, CD<sub>3</sub>OD): δ 7.39-7.28 (m, 5 H), 5.84 (ddt, 1 H, J = 17, 10, 5 Hz), 5.21-5.10 (m, 4 H), 4.10-3.98 (m, 1 H), 3.90 (d, 2 H, J = 5 Hz), 3.43 (br d, 2 H, J = 13 Hz), 3.04 (br t, 2 H, J = 13 Hz), 2.18-2.02 (m, 2 H), 1.93 (d, 2 H, J = 13 Hz).

**Mass spectrum (CI): m/z = 275 (M+1, 100%).**

10

#### PROCEDURE 6

4-(*N*-(4-Nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidine hydrochloride

Step A: 1-(*t*-Butoxycarbonyl)-4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidine  
15 Allylamine (0.45 mL, 0.34 g, 6.0 mmol), acetic acid (0.300 mL, 315 mg, 5.24 mmol), and 3 Å molecular sieves (2.00 g) were added to a solution of 1-(*t*-butoxycarbonyl)-4-piperidone (1.00 g, 5.01 mmol) in 14 mL of 1,2-dichloroethane. After stirring 0.5 h at rt, sodium triacetoxyborohydride (1.62 g, 20 7.6 mmol) was added in two portions 5 min apart. After an additional 3 h, the mixture was partitioned between 30 mL of ethyl acetate and 20 mL of saturated aqueous sodium bicarbonate. The aqueous layer was extracted with 30 mL of ethyl acetate and the organic layers were washed in succession with 20 mL of brine, combined, dried over sodium sulfate, and evaporated to give 1.20 g of crude  
25 4-(allylamino)-1-(*t*-butoxycarbonyl)piperidine as a yellow syrup.

A portion of the crude 4-(allylamino)-1-(*t*-butoxycarbonyl)piperidine (400 mg, 1.66 mmol) was dissolved in 10 mL of dichloromethane and treated with *N,N*-diisopropylethylamine (0.700 mL, 519 mg, 4.0 mmol) and 4-nitrobenzyl chloroformate (392 mg, 1.82 mmol). After stirring 3  
30 h at rt, the mixture was diluted with 30 mL of ethyl acetate and washed with 15 mL each of 2 N aqueous HCl, saturated aqueous sodium bicarbonate, and brine. The organic layer was dried over sodium sulfate, and evaporated. The residue was purified by flash column chromatography on silica gel, eluting with 30% ethyl acetate in hexane, to give 572 mg of the title compound as a colorless syrup.

- <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>): δ 8.22 (d, 2 H, J = 8 Hz), 7.50 (d, 2 H, J = 8 Hz), 5.80 (ddt, 1 H, J = 17, 10, 5 Hz), 5.23 (s, 2 H), 5.18-5.09 (m, 2 H), 4.27-4.08 (m, 3 H), 3.89-3.79 (m, 2 H), 2.79-2.66 (m, 2 H), 1.74-1.52 (m, 4 H), 1.46 (s, 9 H).
- 5 Mass spectrum (ESI): m/z = 420 (M+1, 27%), 437 (M+1+NH<sub>3</sub>, 100%).

Step B: 4-(*N*-(4-Nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidine hydrochloride

- The title compound was prepared according to the procedure of
- 10 Procedure 4, Step E, replacing 4-(*N*-(benzyloxycarbonyl)-*N*-(ethyl)amino)-1-(*t*-butoxycarbonyl)piperidine with 1-(*t*-butoxycarbonyl)-4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidine.

- <sup>1</sup>H NMR (400 MHz, CD<sub>3</sub>OD): δ 8.24 (d, 2 H, J = 8 Hz), 7.60 (d, 2 H, J = 8 Hz), 5.87 (ddt, 1 H, J = 17, 10, 5 Hz), 5.27 (s, 2 H), 5.23-5.13 (m, 2 H), 4.14-3.94 (m, 1 H), 3.94 (d, 2 H, J = 5 Hz), 3.45 (d, 2 H, J = 13 Hz), 3.06 (t, 2 H, J = 13 Hz), 2.20-2.03 (m, 2 H), 2.02-1.90 (m, 2 H).
- 15 Mass spectrum (ESI): m/z = 320 (M+1, 93%).

## 20 PROCEDURE 7

The following substituted piperidines were prepared following the procedures described in Procedure 2 but substituting the appropriate alcohol and/or alkylating agent in Step A and B.

- 25 4-(*N*-(Methoxycarbonyl)-*N*-(hex-1-yl)amino)piperidine  
 4-(*N*-(Methoxycarbonyl)-*N*-(3,5,5-trimethylhex-1-yl)amino)piperidine  
 4-(*N*-(Ethoxycarbonyl)-*N*-(cyclohexylmethyl)amino)piperidine

## PROCEDURE 8

- 30 The following substituted piperidines were prepared following the procedures described in Procedure 4 but substituting the appropriate alkyl bromide or iodide for n-propyl iodide in Step D.

4-(*N*-(Benzyloxycarbonyl)-*N*-(ethyl)amino)piperidine hydrochloride

- 4-(*N*-(Benzyloxycarbonyl)-*N*-(2-methylprop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(Benzyloxycarbonyl)-*N*-(ethyl)amino)piperidine hydrochloride  
 4-(*N*-(Benzyloxycarbonyl)-*N*-(prop-2-yl)amino)piperidine hydrochloride  
 4-(*N*-(Benzyloxycarbonyl)-*N*-(cyclopropylmethyl)amino)piperidine hydrochloride  
 5 4-(*N*-(Benzyloxycarbonyl)-*N*-(1-methylprop-1-yl)amino)piperidine hydrochloride

#### PROCEDURE 9

- The following substituted piperidines were prepared following the procedures described in Procedure 6 but substituting the appropriate alkyl amine and/or acylating agent in Step A.

- 4-(*N*-(3-Nitrobenzyloxycarbonyl)-*N*-(propargyl)amino)piperidine hydrochloride  
 4-(*N*-(2-Nitrobenzyloxycarbonyl)-*N*-(propargyl)amino)piperidine hydrochloride  
 4-(*N*-(4-Nitrobenzylaminocarbonyl)-*N*-(allyl)amino)piperidine hydrochloride  
 15 4-(*N*-(3-Nitrobenzylaminocarbonyl)-*N*-(allyl)amino)piperidine hydrochloride  
 4-(*N*-(2-Nitrobenzylaminocarbonyl)-*N*-(allyl)amino)piperidine hydrochloride  
 4-(*N*-(4-Nitrobenzylcarbonyl)-*N*-(allyl)amino)piperidine hydrochloride  
 4-(*N*-(3-Nitrobenzylcarbonyl)-*N*-(allyl)amino)piperidine hydrochloride  
 4-(*N*-(4-Nitrobenzyloxycarbonyl)-*N*-(propargyl)amino)piperidine hydrochloride  
 20 4-(*N*-(Benzyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(Phenylcarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(Benzylcarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(Cyclohexyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(2-Phenyleth-1-yloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 25 4-(*N*-(3-Phenylprop-1-yloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(4-Phenylbenzyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(2-Naphthylmethyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(1-Naphthylmethyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(4-Methylbenzyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 30 4-(*N*-(4-Trifluoromethylbenzyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(Butyloxycarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride  
 4-(*N*-(Benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidine hydrochloride

35

#### PROCEDURE 10

The following set of 70 substituted piperidines were prepared as their di-TFA salts following the procedures described in Procedure 6 but substituting the appropriate alkyl amine and acylating agent in Step A and using TFA at rt in Step B.

*N*-(1-(SR)-3-(SR)-((4-(*N*-(Benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)glycine di-hydrochloride salt and *N*-(1-(RS)-3-(SR)-((4-(*N*-(benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)glycine di-hydrochloride salt

30

Step A: Methyl (+)-*trans*-4-methylene-2-phenylcyclopentanoate

A mixture of methyl *trans*-cinnamate (5.0 g, 31 mmol), tetrakis(triphenylphosphine) palladium(0) (2.6 g, 2.3 mmol), 1,2-  
5 bis(diphenylphosphino)ethane (0.70 g, 1.8 mmol) and 2-((trimethylsilyl)methyl)-2-propen-1-yl acetate (6.90 g, 37 mmol) in THF (60 mL) under argon was heated to reflux for 4 h. An additional aliquot of 2-((trimethylsilyl)methyl)-2-propen-1-yl acetate (3.40 g) was added and the reaction was continued for another 16 h. The  
10 volatiles were then removed *in vacuo* and the residue was purified by FC (10% ethyl acetate in hexanes) to afford the title compound (6.2 g).

NMR (CDCl<sub>3</sub>)  $\delta$ : 2.52 (m, 1 H), 2.68 (m, 1 H), 2.75-2.9 (m, 2 H), 2.95 (ddd, 1 H), 3.45 (ddd, 1 H), 3.57 (s, 3 H), 4.92 (m, 2 H), 7.15-7.3 (m, 5 H).

15 Step B: (+)-*trans*-1-Hydroxymethyl-4-methylene-2-phenylcyclopentane

To a solution of methyl (+)-*trans*-4-methylene-2-phenylcyclopentanoate (5.0 g, 23 mmol) from Step A in THF (30 mL) under nitrogen was added dropwise over 10 min 1M lithium aluminum hydride (LAH) in THF (23 mL). After 2 h at rt, the excess LAH was quenched by dropwise addition of ethyl  
20 acetate and the reaction was then poured into dilute aq. HCl. The mixture was extracted twice with ether and the organic layers were washed with brine, dried over sodium sulfate, combined and concentrated. The residue was purified by FC (20 - 30% ethyl acetate in hexanes) to afford the title product (4.5 g) as a white solid.

25 Step C: (+)-*trans*-4-Methylene-2-phenylcyclopentanecarboxaldehyde

To a solution of oxalyl chloride (1.16 mL, 13.3 mmol) in methylene chloride (50 mL) at -70 °C was added dropwise DMSO (1.88 mL, 26.6 mmol). After 15 min, a solution of (+)-*trans*-1-hydroxymethyl-4-methylene-2-phenylcyclopentane from Step B (1.0 g, 5.3 mmol) in methylene chloride (10 mL) was  
30 added. The reaction was stirred at -70 °C for 1.5 h and then DIPEA (9.25 mL, 53 mmol) in methylene chloride (10 mL) was added dropwise over 5 min. After a further 10 min, the mixture was allowed to warm to rt for 1 h and then diluted with methylene chloride and poured into dilute aq. HCl. The layers were separated. The aq. layer was reextracted with a second portion of methylene chloride and the organic layers were  
35 each washed with brine, dried over sodium sulfate, combined and concentrated *in*

*vacuo*. The residue was purified by FC (20% ethyl acetate in hexanes) to give the title product (0.88 g) after vacuum drying.

**Step D:** 1-Methylene-3-(SR)-((4-(N-(benzylaminocarbonyl)-N-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopentane

5

To a solution of (+)-*trans*-4-methylene-2-

phenylcyclopentanecarboxaldehyde from Step C (880 mg, 4.7 mmol) in 1,2-

dichloroethane (50 mL) was added 4-(N-(benzylaminocarbonyl)-N-(prop-1-

yl)amino)piperidine hydrochloride (1.62 g, 5.2 mmol) and DIPEA (1.0 mL, 5.7

10 mmol). After 15 min, sodium triacetoxyborohydride (2.0 g, 9.5 mmol) was added and

the reaction was stirred at rt for 4 h. The reaction was diluted with methylene

chloride, quenched with aq. sodium carbonate and extracted 3 times with methylene

chloride. The organic layers were each washed with brine, dried over sodium sulfate,

combined and concentrated *in vacuo*. The residue was purified by FC eluting with

15 60% ethyl acetate in hexanes to give the title product (1.8 g) as the free amine.

MS (NH<sub>3</sub>/ESI): m/z 448 (M + 1).

**Step E:** 3-(SR)-((4-(N-(Benzylaminocarbonyl)-N-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopentan-1-one

20

To a solution of 1-methylene-3-(SR)-((4-(N-(benzylaminocarbonyl)-N-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopentane from Step D (1.8

g, 4.0 mmol) in methanol (50 mL) was added 1M hydrogen chloride in ether (6.0 mL,

6.0 mmol). The solution was cooled in a dry ice/acetone bath and ozone was bubbled

into the solution until the blue color persisted. The excess ozone was removed with a

25 stream of nitrogen and then dimethylsulfide (5 mL) was added. After 10 min, the bath

was removed and the reaction was allowed to warm to rt over 16 h. The volatiles

were removed *in vacuo* and the residue was purified by FC (ethyl acetate, then 1%

DIPEA in ethyl acetate) to give the title compound (1.13 g).

30 **Step F:** *N*-(1-(SR)-3-(SR)-((4-(N-(Benzylaminocarbonyl)-N-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)glycine t-butyl ester (higher R<sub>f</sub>) and *N*-(1-(RS)-3-(SR)-((4-(N-(benzylaminocarbonyl)-N-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)glycine t-butyl ester (lower R<sub>f</sub>)

To a solution of 3-(SR)-((4-(*N*-(benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopentan-1-one (52 mg, 0.12 mmol) from Step E, glycine *t*-butyl ester hydrochloride (60 mg, 0.36 mmol) and DIPEA (0.063 mL, 0.36 mmol) in 1,2-dichloroethane (2 mL) at rt was added sodium triacetoxyborohydride (100 mg, 0.47 mmol). The reaction was stirred at rt for 16 h and was then diluted with methylene chloride, quenched with aq. sodium carbonate and extracted 3 times with methylene chloride. The organic layers were each washed with brine, dried over sodium sulfate, combined and concentrated *in vacuo*. The residue was purified by Prep TLC eluting with 75% ethyl acetate in hexanes to give separation of the two C-1 diastereomeric racemic title products as the free amines. The stereochemistry for each was assigned based on the results of Example 6, 7 and 8. (higher *R<sub>f</sub>*): MS (NH<sub>3</sub>/ESI): *m/z* 563 (*M* + 1). (lower *R<sub>f</sub>*): MS (NH<sub>3</sub>/ESI): *m/z* 563 (*M* + 1).

**Step G:** *N*-(1-(SR)-3-(SR)-((4-(*N*-(Benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)glycine di-hydrochloride salt (from higher *R<sub>f</sub>*) and *N*-(1-(RS)-3-(SR)-((4-(*N*-(benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)glycine di-hydrochloride salt (from lower *R<sub>f</sub>*)

The individual diastereomers from Step F were each taken up in 1:1 methylene chloride:ether (2 mL) and 1M hydrogen chloride in ether (1 mL) was added. After 3 days at rt the volatiles were removed under nitrogen to give the title racemic compounds as white solids. (from higher *R<sub>f</sub>*): MS (NH<sub>3</sub>/ESI): *m/z* 507 (*M* + 1). (from lower *R<sub>f</sub>*): MS (NH<sub>3</sub>/ESI): *m/z* 507 (*M* + 1).

#### EXAMPLE 2

*N*-Methyl-*N*-(1-(SR)-3-(SR)-((4-(*N*-(benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)glycine di-hydrochloride salt and *N*-methyl-*N*-(1-(RS)-3-(SR)-((4-(*N*-(benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)glycine di-hydrochloride salt

Using essentially the same procedures as in Example 1, Step F and G, but substituting N-methyl glycine t-butyl ester hydrochloride in Step F, the two individual diastereomeric racemic title compounds were obtained but the stereochemistries for each were not assigned.

5 (Each isomer): MS (NH<sub>3</sub>/ESI): m/z 521 (M + 1).

### EXAMPLE 3

*N*-(1-(SR and RS)-3-(SR)-((4-(*N*-(Benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)-D-alanine di-  
10 hydrochloride salt and *N*-(1-(RS and SR)-3-(RS)-((4-(*N*-(benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(RS)-phenylcyclopent-1-yl)-D-alanine di-hydrochloride salt

Using essentially the same procedures as in Example 1, Step F and G,  
15 but substituting D-alanine t-butyl ester hydrochloride in Step F, partial separation of the four possible diastereomeric title compounds into three fractions was achieved but the purities and stereochemistries for each were not assigned.

(Each isomer): MS (NH<sub>3</sub>/ESI): m/z 521 (M + 1).

20

### EXAMPLE 4

*N*-(1-(SR and RS)-3-(SR)-((4-(*N*-(Benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)-L-alanine di-  
hydrochloride salt and *N*-(1-(RS and SR)-3-(RS)-((4-(*N*-(benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(RS)-phenylcyclopent-1-yl)-L-alanine di-  
25 hydrochloride salt

Using essentially the same procedures as in Example 1, Step F and G, but substituting L-alanine t-butyl ester hydrochloride in Step F, partial separation of the four possible diastereomeric title compounds into three fractions was achieved but  
30 the purities and stereochemistries for each were not assigned.

(Each isomer): MS (NH<sub>3</sub>/ESI): m/z 521 (M + 1).

### EXAMPLE 5

*N*-(1-(SR and RS)-3-(SR)-((4-(*N*-(Benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopent-1-yl)-L-phenylalanine di-  
35

hydrochloride salt and *N*-(1-(RS and SR)-3-(RS)-((4-(*N*-(benzylaminocarbonyl)-*N*-(prop-1-yl)amino)piperidin-1-yl)methyl)-4-(RS)-phenylcyclopent-1-yl)-L-phenylalanine di-hydrochloride salt

- 5                    Using essentially the same procedures as in Example 1, Step F and G, but substituting L-phenylalanine t-butyl ester hydrochloride in Step F, partial separation of the four possible diastereomeric title compounds into two fractions was achieved but the purities and stereochemistries for each were not assigned. (Each isomer): MS (NH<sub>3</sub>/ESI): *m/z* 597 (*M* + 1).

10

#### EXAMPLE 6

- N*-(1-(S)-3-(R)-((4-(*N*-(4-Nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(R)-phenylcyclopent-1-yl)-L-leucine (Isomer 6A), *N*-(1-(S)-3-(S)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-L-leucine (Isomer 6B), *N*-(1-(R)-3-(S)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-L-leucine (Isomer 6C) and *N*-(1-(R)-3-(R)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(R)-phenylcyclopent-1-yl)-L-leucine (Isomer 6D) di-TFA salts

20

Step A:            (+)-*trans*-4-Methylene-2-phenylcyclopentanoic acid

- To a solution of methyl (+)-*trans*-4-methylene-2-phenylcyclopentanoate prepared as in Example 1, Step A (28.4 g, 131 mmol) in methanol (400 mL) was added 5N sodium hydroxide (131 mL, 656 mmol). The reaction was heated at 65 °C for 1 h then cooled and concentrated. The residue was diluted with water, acidified with 2M hydrochloric acid and extracted twice with methylene chloride. The organic layers were each washed with brine, dried over sodium sulfate, combined and concentrated *in vacuo* to give the crude title acid (27.2 g) which was used directly in Step B.

30

Step B:            (+)-*trans*-1-Hydroxymethyl-4-methylene-2-phenylcyclopentane

- To a solution of (+)-*trans*-4-methylene-2-phenylcyclopentanoic acid (26 g, 129 mmol) from Step A in THF (600 mL) under nitrogen at -10 °C was added dropwise over 15 min 1M lithium aluminum hydride (LAH) in THF (193 mL, 193 mmol). After 16 h at rt, the excess LAH was quenched by dropwise addition of

35

acetone and the reaction was then poured into dilute aq. HCl. The mixture was extracted twice with ether and the organic layers were washed with brine, dried over sodium sulfate, combined and concentrated. The residue was purified by FC (20% ethyl acetate in hexanes) to afford the title product (23.8 g) as an oil.

5

Step C: (+)-*trans*-1-Hydroxymethyl-4-oxo-2-phenylcyclopentane

Into a solution of (+)-*trans*-1-hydroxymethyl-4-methylene-2-phenylcyclopentane from Step B (22.7 g, 121 mmol) in methanol (200 mL) cooled in a dry ice/acetone bath was bubbled ozone until the blue color persisted. The excess  
10 ozone was removed with a stream of nitrogen and then dimethylsulfide (20 mL) was added. After 10 min, the bath was removed and the reaction was allowed to warm to rt over 16 h. The volatiles were removed *in vacuo* and the residue was purified by FC (15 -30% ethyl acetate in hexanes) to give the title compound (22.1 g).

15 Step D: (+)-*trans*-4-Oxo-2-phenylcyclopentanecarboxaldehyde

To a solution of oxalyl chloride (1.15 mL, 13.1 mmol) in methylene chloride (30 mL) at -70 °C was added dropwise DMSO (1.87 mL, 26.3 mmol). After 15 min, a solution of (+)-*trans*-1-hydroxymethyl-4-oxo-2-phenylcyclopentane from Step C (1.0 g, 5.26 mmol) in methylene chloride (10 mL)  
20 was added. The reaction was stirred at -70 °C for 1.5 h and then DIPEA (9.25 mL, 53 mmol) in methylene chloride (10 mL) was added dropwise over 5 min. After a further 10 min, the mixture was allowed to warm to rt for 1 h and then diluted with methylene chloride and poured into dilute aq. HCl. The layers were separated. The aq. layer was reextracted with a second portion of methylene chloride and the organic layers were  
25 each washed with brine, dried over sodium sulfate, combined and concentrated *in vacuo*. The residue was purified by FC (30% ethyl acetate in hexanes) to give the title product (0.9 g) after vacuum drying.

30 Step E: 3-(SR)-((4-(*N*-(4-Nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopentan-1-one di-hydrochloride salt

To a solution of (+)-*trans*-4-oxo-2-phenylcyclopentanecarboxaldehyde from Step D (327 mg, 1.74 mmol) in 1,2-dichloroethane (20 mL) was added 4-(*N*-(4-nitrobenzyloxycarbonyl)(*N*-allyl)amino)piperidine hydrochloride (667 mg, 1.9 mmol) and DIPEA (0.36 mL, 2.1  
35 mmol). After 5 min, sodium triacetoxyborohydride (740 mg, 3.5 mmol) was added

and the reaction was stirred at rt for 4 h. The reaction was diluted with methylene chloride, quenched with aq. sodium carbonate and extracted 3 times with methylene chloride. The organic layers were each washed with brine, dried over sodium sulfate, combined and concentrated *in vacuo*. The residue was purified by FC eluting with a  
 5 gradient of 35 to 75% ethyl acetate in hexanes to give the title product (365 mg) as the free amine. This was taken up in ether and 1M hydrogen chloride in ether (0.5 mL) was added to form the di-hydrochloride salt. The volatiles were removed *in vacuo* to give the title salt.

MS (NH<sub>3</sub>/ESI): m/z 492 (M + 1).

10

Step F: *N*-(1-(S)-3-(R)-((4-(*N*-(4-Nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(R)-phenylcyclopent-1-yl)-L-leucine t-butyl ester (Isomer A), *N*-(1-(S)-3-(S)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-L-leucine t-butyl ester (Isomer B), *N*-(1-(R)-3-(S)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-L-leucine t-butyl ester (Isomer C) and *N*-(1-(R)-3-(R)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(R)-phenylcyclopent-1-yl)-L-leucine t-butyl ester (Isomer D)

15

20

To a solution of 3-(SR)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(SR)-phenylcyclopentan-1-one (52 mg, 0.10 mmol) from Step E, L-leucine t-butyl ester hydrochloride (65 mg, 0.29 mmol) and DIPEA (0.069 mL, 0.40 mmol) in 1,2-dichloroethane (2 mL) at rt was added sodium triacetoxyborohydride (41 mg, 0.20 mmol). The reaction was stirred at rt for 16 h and was then diluted with methylene chloride, quenched with aq. sodium carbonate and extracted 3 times with methylene chloride. The organic layers were each washed with brine, dried over sodium sulfate, combined and concentrated *in vacuo*. The residue was purified by Prep TLC eluting first with 75% ethyl acetate in hexanes to give  
 25 partial separation of the four diastereomeric title products. Prep TLC was repeated with 40% ethyl acetate in hexanes for each band to give clean highest R<sub>f</sub> product (Isomer A), a mixture of the middle R<sub>f</sub> products (Isomers B and C), and clean lowest R<sub>f</sub> product (Isomer D) as the free amines.

30

(higher R<sub>f</sub>): HPLC/MS (ESI): m/z 663 (M + 1).

35 (middle R<sub>f</sub>): HPLC/MS (ESI): m/z 663 (M + 1) (2 isomers seen).

(lower  $R_f$ ): HPLC/MS (ESI):  $m/z$  663 ( $M + 1$ ).

**Step G:** *N*-(1-(S)-3-(R)-((4-(*N*-(4-Nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(R)-phenylcyclopent-1-yl)-L-leucine (Isomer 6A), *N*-(1-(S)-3-(S)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-L-leucine (Isomer 6B), *N*-(1-(R)-3-(S)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-L-leucine (Isomer 6C) and *N*-(1-(R)-3-(R)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(R)-phenylcyclopent-1-yl)-L-leucine (Isomer 6D) di-TFA salts

The 2 individual diastereomers and the mixed diastereomers from Step F were each taken up in 1:1 methylene chloride:ether (2 mL) and 1M hydrogen chloride in ether (1 mL) was added. After 3 days at rt the volatiles were removed under nitrogen to give the title compounds as white solids. These were analyzed by HPLC (Advantage 4.6 x 150 mm C-18 column, using a gradient of 10% A:90% B to 35% A:65% B over 30 min; A = 0.5% TFA in water, B = 0.5% TFA in acetonitrile) and purified by Prep HPLC (Combi Prep 20 x 50 mm C-18). Evaporation of the clean fractions to dryness afforded the title compounds as their di-TFA salts.

Isomer A (from highest  $R_f$ ): HPLC/MS (ESI):  $m/z$  607 ( $M + 1$ ),  $R_t$  = 25.5 min

Isomer B (from middle  $R_f$ ): HPLC/MS (ESI):  $m/z$  607 ( $M + 1$ ),  $R_t$  = 25.2 min.

Isomer C (from middle  $R_f$ ): HPLC/MS (ESI):  $m/z$  607 ( $M + 1$ ),  $R_t$  = 25.9 min.

Isomer D (from lowest  $R_f$ ): HPLC/MS (ESI):  $m/z$  607 ( $M + 1$ ),  $R_t$  = 25.2 min.

#### EXAMPLE 7

*N*-(1-(R)-3-(S)-((4-(*N*-(4-Nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-D-leucine (Isomer 7E), *N*-(1-(R)-3-(R)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(R)-phenylcyclopent-1-yl)-D-leucine (Isomer 7F), *N*-(1-(S)-3-(R)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(R)-phenylcyclopent-1-yl)-D-leucine (Isomer 7G) and *N*-(1-(S)-3-(S)-((4-(*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-D-leucine (Isomer 7H) di-TFA salts

Using essentially the same procedures as in Example 6, Step F and G, but substituting D-leucine t-butyl ester hydrochloride in Step F, the four title diastereomers were obtained which were enantiomeric to those of Example 6.

- 5 Isomer E (from highest  $R_f$ ): HPLC/MS (ESI):  $m/z$  607 ( $M + 1$ ),  $R_t = 25.5$  min  
 Isomer F (from middle  $R_f$ ): HPLC/MS (ESI):  $m/z$  607 ( $M + 1$ ),  $R_t = 25.2$  min.  
 Isomer G (from middle  $R_f$ ): HPLC/MS (ESI):  $m/z$  607 ( $M + 1$ ),  $R_t = 25.9$  min.  
 Isomer H (from lowest  $R_f$ ): HPLC/MS (ESI):  $m/z$  607 ( $M + 1$ ),  $R_t = 25.2$  min.

10

### EXAMPLE 8

- N*-(1-(S)-3-(S)-((4-(*N*-(4-Nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-L-leucine (Isomer 6B) and *N*-(1-(S)-3-(S)-((4-  
 15 (*N*-(4-nitrobenzyloxycarbonyl)-*N*-(allyl)amino)piperidin-1-yl)methyl)-4-(S)-phenylcyclopent-1-yl)-D-leucine (Isomer 7H) di-TFA salts

Step A: (+)-*trans*-4-Methylene-2-phenylcyclopentanoic acid

- To a solution of methyl (+)-*trans*-4-methylene-2-  
 20 phenylcyclopentanoate prepared as in Example 1, Step A (28.4 g, 131 mmol) in methanol (400 mL) was added 5N sodium hydroxide (131 mL, 656 mmol). The reaction was heated at 65 °C for 1 h then cooled and concentrated. The residue was diluted with water, acidified with 2M hydrochloric acid and extracted twice with methylene chloride. The organic layers were each washed with brine, dried over  
 25 sodium sulfate, combined and concentrated *in vacuo* to give the crude title acid (27.2 g) which was used directly in Step B.

Step B: (+)-*trans*-4-Methylene-2-phenylcyclopentanoic acid, (S)-(-)-  $\alpha$ -methylbenzylamine salt and (-)-*trans*-4-methylene-2-  
 30 phenylcyclopentanoic acid, (R)-(+)-  $\alpha$ -methylbenzylamine salt

- The crude (+)-*trans*-4-methylene-2-phenylcyclopentanoic acid from Step A (assumed 131 mmol) was taken up in 2-propanol (400 mL), warmed to 80 °C and treated with (S)-(-)-  $\alpha$ -methylbenzylamine (8.45 mL, 66 mmol). The mixture was stirred while allowed to cool to rt over 16 h and was then cooled to -10 °C for 1 h.  
 35 The salt was filtered, washed with a small amount of ether to remove 2-propanol and

air dried to give 6.442 g of salt. This was recrystallized twice from 2-propanol to give the title salt (4.713 g),  $[\alpha]_D = +56$  (MeOH,  $c = 0.20$ ).

The combined mother liquors from above were concentrated and the residue was taken up in water, acidified with 2M hydrochloric acid and extracted  
5 twice with methylene chloride. The organic layers were each washed with brine, dried over sodium sulfate, combined and concentrated *in vacuo*. The residue was taken up in 2-propanol (400 mL), warmed to 80 °C and treated with (R)-(+)-  $\alpha$  - methylbenzylamine (9.1 mL, 70 mmol). The mixture was stirred while allowed to cool to rt over 16 h and was then cooled to -10 °C for 1 h. The salt was filtered,  
10 washed with a small amount of ether to remove 2-propanol and air dried to give 8.22 g of salt. This was recrystallized from 2-propanol to give the title salt (6.31 g),  $[\alpha]_D = -55$  (MeOH,  $c = 0.21$ ).

Step C: (+)-*trans*-4-Methylene-2-phenylcyclopentanoic acid and (-)-*trans*-4-  
15 methylene-2-phenylcyclopentanoic acid

Method A:

The (+)-*trans*-4-methylene-2-phenylcyclopentanoic acid, (S)-(-)-  $\alpha$  - methylbenzylamine salt from Step B (4.7 g) was suspended in methylene chloride and water and acidified with 2M hydrochloric acid and extracted twice with methylene  
20 chloride. The organic layers were each washed with brine, dried over sodium sulfate, combined and concentrated *in vacuo* to give the title (+) acid (3.1 g),  $[\alpha]_D = +101$  (MeOH,  $c = 0.135$ ).

Similarly, the (-)-*trans*-4-methylene-2-phenylcyclopentanoic acid, (R)-  
25 (+)-  $\alpha$  -methylbenzylamine salt (6.3 g) was converted to the free (-)-title acid (4.23 g),  $[\alpha]_D = -103$  (MeOH,  $c = 0.23$ ).

Method B:

Step B1: 1-(S)-(((S)-(-)-4-Benzyl-2-oxazolidin-1-yl)carbonyl)-3-methylene-2-  
30 (S)-phenylcyclopentane (higher  $R_f$ ) and 1-(R)-(((S)-(-)-4-benzyl-2-oxazolidin-1-yl)carbonyl)-3-methylene-2-(R)-phenylcyclopentane (lower  $R_f$ )

A solution of (+)-*trans*-4-methylene-2-phenylcyclopentanoic acid (47.5 g, 235 mmol) in ether (1 L) and TEA (36 mL, 260 mmol) was cooled to -10 °C.  
35 Trimethylacetyl chloride (31.8 mL, 260 mmol) was then added slowly and after
